

INTERNATIONAL TOBACCO CONTROL POLICY EVALUATION PROJECT (ITC)

Youth and Young Adult Tobacco & Vaping Survey

PRELIMINARY TECHNICAL REPORT – WAVE 8 (2024 - August)

FEBRUARY 6, 2025

ACKNOWLEDGEMENTS

THE ITC YOUTH TOBACCO AND VAPING SURVEY ANNUAL WAVES 1-4, AND 6-8 (IN CANADA, UK AND US) WERE SUPPORTED BY A P01 GRANT (1P01CA200512) FROM THE US NATIONAL INSTITUTES OF HEALTH. DATA COLLECTION IN AUSTRALIA (WAVE 8) WAS SUPPORTED BY AN IDEAS GRANT FROM AUSTRALIA'S NATIONAL HEALTH AND MEDICAL RESEARCH COUNCIL. WAVE 7 IN NEW ZEALAND WAS SUPPORTED BY THE US NATIONAL CANCER INSTITUTE (NCI) AND FDA CENTER FOR TOBACCO PRODUCTS (CTP; 3P01CA200512-07S1). WAVES 3.5, 4.5, AND 5 WERE SUPPORTED BY A CONTRIBUTION FROM HEALTH CANADA'S SUBSTANCE USE AND ADDICTIONS PROGRAM (SUAP). THE CONTENT IS SOLELY THE RESPONSIBILITY OF THE AUTHORS AND DOES NOT NECESSARILY REPRESENT THE VIEWS OF THE FUNDERS.

INTRODUCTION

The global nicotine market is rapidly evolving due to the emergence of vaporized nicotine products (VNPs), such as e-cigarettes. Regulators are considering a broad range of policies to minimize youth uptake of VNPs, particularly with regards to restrictions on forms of promotion and product attributes that may enhance appeal among youth. The International Tobacco Control Policy Evaluation Project (ITC) Youth and Young Adult Tobacco and Vaping Survey is examining uptake of e-cigarettes and other novel nicotine products among youth in three countries with very different policy environments: the United States (US), Canada, and England. Overall, the project seeks to increase the understanding of the factors that predict uptake among youth and to examine policy measures that influence prevalence and patterns of use.

The overall study consists of prospective cohorts and repeated cross-sections, to examine changes over time in the US, England, and Canada. The baseline wave (Wave 1) was recruited in 2017, with annual waves conducted thereafter. The cohort portion of the design was discontinued in Wave 4 due to low follow-up rates; the repeated cross-sectional surveys continued. In addition, semi-annual waves were added in 2020, between Waves 3 and 4 (Wave 3.5), and between Waves 4 and 5 (Wave 4.5). Sample sizes vary across waves due to supplemental funding to oversample individual US states and/or Canadian provinces in some waves. Starting in Wave 6, the study was extended as the ITC Youth and Young Adult Tobacco and Vaping Survey, including samples of young adults in each country in subsequent waves. In Waves 7 and 8, the survey also included youth and young adults in New Zealand, and Wave 8 included youth in Australia.

This technical report describes the methods for Wave 7 data collection from youth and young adults in the three countries (Canada, England, US), as well as New Zealand and Australia.

STUDY PROTOCOL

OVERVIEW

Data were collected via a self-completed online survey, conducted from August 1 to September 10, 2024 in the three countries (and Australia) and from August 2 to September 30, 2023 in New Zealand. Participants were youth aged 16-19 in Canada, England, the US, New Zealand and Australia, and young adults aged 20-29 in Canada, England, the US, and New Zealand, who were members of consumer panels.

SAMPLE AND RECRUITMENT

The sample was recruited from the Nielsen Consumer Insights Global Panel, which maintains panels in the US, Canada, England, and Australia, as well as their partners' panels. The Nielsen panel is recruited using both probability and non-probability sampling methods in each country. Nielsen selected random samples from the online panel(s) in each country. Recruitment targets at each wave included 4,500 respondents aged 16-19 and, starting in Wave 6, 1000 young adults aged 20-29 in each of Canada, England, and the United States. In Wave 8, youth in Australia were included, with a recruitment target of 2000. In Waves 7 and 8, youth and young adults aged 16-29 in New Zealand were recruited through Dynata and TGM Research.

Eligible respondents included youth aged 16 through 19 and young adults aged 20 through 29. Respondents were recruited either directly or through their parents (youth only). Panelists were invited through email invitations (with a unique link) or via their account (website or app), after targeting for age criteria; panelists known to be ineligible were not invited. Panelists known to be parents were also contacted; those who confirmed they had one or more children aged 16-19 living in their household were asked for permission for their child to complete the survey (if more than one child,

specifically the one whose birthday was coming up next). After eligibility screening, all potential respondents were provided with information about the study and were asked to provide consent before participating. In Waves 1 and 2, a restriction on small screen size was applied to ensure that images presented in the survey could be viewed with a minimum amount of scrolling; however, this restriction was not applied to later waves.

In Waves 1 through 3.5, all respondents from previous waves who were still panel members were invited to participate. To replace those lost to follow-up, new respondents were recruited as outlined above, up to the target recruitment numbers (4,500 respondents in each of Canada, England, and the United States). In Wave 4, the longitudinal follow-up with respondents from previous waves was discontinued due to low follow-up rates.

PARTICIPANT REMUNERATION

Respondents received remuneration in accordance with their panel's usual incentive structure, which could include points-based or monetary rewards (redeemed for catalog items, as cash or donated) and/or chances to win monthly prizes.

ETHICS CLEARANCE

This study was reviewed and received ethics clearance through a University of Waterloo Research Ethics Committee (ORE#21847/31017), as well as the University of Otago Human Ethics Committee (reference number 23/065) and the University of Queensland (2023/HE002406).

SURVEY CONTENT

Participants completed a 20-minute survey, available in English in all countries, as well as French in Canada. The survey consisted of sociodemographic measures, questions on e-cigarette and tobacco use, with additional questions on other health behaviours, including marijuana use (*see Appendix A for full questionnaire*).

SURVEY CHANGES FROM WAVE 7

In Wave 8, items were added regarding illicit vaping products/sources; synthetic nicotine products (awareness and use); support for banning disposable vapes; regret among those who smoked and/or vaped; and noticing cigarettes, vaping products, nicotine pouches in convenience stores. The oral nicotine pouches section was expanded to include purchasing and sources, flavours, and context for use. An item was also added prior to the survey content with a task designed to screen out 'bots'. Australia-specific content was also added, including country-specific sociodemographic questions (including state/territory, education, household income, race/ethnicity), as well as items regarding Australian policy measures (ease of access for illicit tobacco, prescription e-cigarette use, access and perceptions, and pharmacy access to vaping products).

Some revisions were also made to existing content for Wave 8. The brand lists for cigarettes, e-cigarettes, heated tobacco products (HTPs), and oral nicotine pouches were updated, as were brand-specific follow-up items for HTPs and e-cigarettes, to reflect current product availability. Previously text-based brand-specific follow-up questions regarding usual e-cigarette brand(s) were replaced with image-based questions. The wording of items regarding purchase attempts for cigarettes and e-cigarettes remained in the revised form for NZ respondents, and reverted to the original for all respondents in Canada, England and the US (as well as Australia). The images of e-cigarettes and device types were also updated to reflect current products available. Regarding e-cigarettes, more detail on lifetime use above 100 days was asked, and questions on local nicotine limits were extended to all countries, while items on the effects of banning high-

nicotine products were removed. Throughout the survey, wording options relevant to Australia were used for that country. Lastly, household income, which has previously been asked of panelists by the survey firm in a screener, was moved to the end of main survey content.

Some content was removed in Wave 8, including an experiment regarding standardized e-cigarette appearance, and some NZ-specific policy questions that were no longer relevant due to changes in the government's regulatory plans.

DATA INTEGRITY CHECK

As a data integrity check, part of the way through the survey, respondents were asked to select the current month from a list. The month selected by the respondent was compared to the month when the survey was submitted. Respondents with month discrepancies were excluded from the analytic sample, unless the selected month was within two days of the date the survey was submitted (e.g., selected August but submitted on September 1st or 2nd).

QUESTIONNAIRE DEVELOPMENT

Measures were adapted from existing national benchmark surveys (e.g., Canadian Tobacco Alcohol and Drugs Survey (CTADS),¹ Canadian Student Tobacco Alcohol and Drugs Survey (CSTADS),² Population Assessment of Tobacco and Health (PATH) Study³), as well as previous versions of the ITC surveys.⁴ The same survey measures were used in all countries, with the exception of race/ethnicity, geographic region (i.e., province, state, or region), and education questions, which were based on census questions in each country (*see Appendix A*). Some New Zealand-specific items added in Wave 7 to assess national policy measures were from the adult ITC survey in NZ (EASE), and for comparability with national surveys.⁵

SAMPLE INFORMATION

PARTICIPATION

CANADA, ENGLAND, US

In the three countries, a total of 16,495 surveys were completed: 13,496 youth aged 16-19 (n=4497 in Canada, n=4501 in England, n=4498 in the US), and 2999 young adults aged 20-29 (n=1001 in Canada, n=999 in England, n=999 in the US). Respondents who provided an incorrect response to the data quality check question [n=957: n=711 youth (213 in Canada, 180 in England, 317 in the US); n=247 young adults (77 in Canada, 60 in England, 110 in the US)], or provided 5 or more invalid open-ended responses or a suspicious pattern of open-ended responses [n=129; n=77 youth (32 in Canada, 15 in England, 30 in the US) and 52 young adults (11 in Canada, 20 in England, 21 in the US)] were removed, as were participants who provided incomplete or invalid data on variables used for weighting^a [n=362: n=301 youth (90 in Canada, 93 in England, 118 in the US); n=61 young adults (20 in Canada, 18 in England, 23 in the US)]. A total of 15,047 respondents were retained for analysis (n=5055 in Canada; n=5114 in England; n=4878 in the US): 12,408 youth (n=4162 in Canada; n=4213 in England; n=4033 in the US) and 2639 young adults (n=893 in Canada; n=901 in England; n=845 in the US).

NEW ZEALAND

In New Zealand, a total of 3093 surveys were completed: 931 youth aged 16-19 and 2162 young adults aged 20-29. Respondents who provided an incorrect response to the data quality check question (n=135; n=42 youth and n=93 young adults) or provided 5 or more invalid open-ended responses or a suspicious pattern of open-ended responses (n=15; n=7 youth and n=8 young adults) were removed, as were participants who provided incomplete or invalid data on variables used for weighting^b (n=71: n=30 youth and n=41 young adults). A total of 2872 respondents in New Zealand were retained for analysis: 852 youth and 2020 young adults.

AUSTRALIA

In Australia, a total of 3152 surveys of youth aged 16-19 were completed. Respondents who provided an incorrect response to the data quality check question (n=209) or provided 5 or more invalid open-ended responses or a suspicious pattern of open-ended responses (n=87) were removed, as were participants who provided incomplete or invalid data on variables used for weighting^c (n=78). A total of 2778 youth respondents in Australia were retained for analysis.

^aAge, country, geographic region, and ever smoking variables were mandatory responses in Wave 8. Weighting also required sex at birth (n=111 not specified and unable to be imputed from gender: 88 youth, 23 young adults) and last smoked (n=13 'Don't know' responses: 11 youth, 2 young adults), while ever vaping (n=145 'Don't know'/'Refused' responses: 121 youth, 24 young adults) and last vaped (n=83 'Don't know'/'Refused' responses: 71 youth, 12 young adults) were key variables required for inclusion in the dataset; respondents were excluded for missing one or more of these variables.

^bFor New Zealand, weighting required sex at birth (n=23 not specified and unable to be imputed from gender: 8 youth, 15 young adults) and last smoked (n=1 'Don't know' response: 1 youth, 0 young adults), while ever vaping (n=28 'Don't know'/'Refused' responses: 13 youth, 15 young adults) and last vaped (n=19 'Don't know'/'Refused' responses: 8 youth, 11 young adults) were key variables required for inclusion in the dataset; respondents were excluded for missing one or more of these variables.

^cFor Australia, weighting required sex at birth (n=34 not specified and unable to be imputed from gender) and last smoked (n=1 'Don't know' response), while ever vaping (n=36 'Don't know'/'Refused' responses) and last vaped (n=7 'Don't know'/'Refused' responses) were key variables required for inclusion in the dataset; respondents were excluded for missing one or more of these variables.

RESPONSE AND PARTICIPATION RATES

CANADA, ENGLAND, US

A total of 162,188 invitations were sent to panelists (84,217 directly to youth, 44,904 to parents, 33,067 to young adults): n=73,719 in Canada (39,682 youth, 22,307 parents, 11,730 young adults), n=50,033 in England (25,881 youth, 12,542 parents, 11,610 young adults), and n=38,436 in the US (18,654 youth, 10,055 parents, 9,727 young adults). Of these, 15,047 (9.3% of those invited) completed the survey and were retained for analysis: n=5055 in Canada (6.9% of those invited); n=5114 in England (10.2% of those invited); n=4878 in the US (12.7% of those invited).

Of the 162,188 total invitations, 43,329 potential respondents (26.7% of those invited) accessed the survey link. A total of 16,495 surveys were completed (38.1% of those who accessed the survey link), and 4,337 were partially completed [dropouts (n=4082) or terminated before completing the survey (n=255)]. A further 12,444 were screened ineligible and terminated (including 3,477 who were flagged as data quality concerns for failing authenticity checks), 3,445 may have been eligible but their country quota was full, and 4,375 did not provide enough information to determine eligibility (due to closing the survey before completing all eligibility questions, or parent non-consent). Regarding consent, 679 parents and 1,912 respondents refused participation (n=2591 total refusals) and a further 321 respondents and 167 parents reached the study information but did not consent. Of the 16,495 completed surveys, n=15,047 (91.2%) were retained for analysis.

TABLE 1: Dispositions of potential respondents in Canada, England, and US who accessed the survey link (n=43,329)

Disposition	n	%
Eligible	23,065	53.2%
Complete	16,495	38.1%
Consented, survey incomplete	4,337 ^a	10.0%
Screened eligible, did not consent	2,233 ^b	5.2%
Ineligible	12,444	28.7%
Screened ineligible	8,967 ^c	20.7%
Inconsistent/quality issue	3,477 ^d	8.0%
Eligibility unknown	4,375	10.1%
Not fully screened, parent did not consent	846 ^e	2.0%
Not fully screened, eligibility unknown	3,529 ^f	8.1%
Over quota	3,445^g	8.0%
TOTAL	43,329	100%

^aIncludes n=255 respondents who were terminated (n=222 for refusing a key item, n=33 flagged by the survey panel for quality or other reasons)

^bIncludes refusals (n=1912 at respondent level) and those who did not respond to the consent question (n=321 at respondent level)

^cRespondent screened ineligible [due to ineligible age (n=845 were <16 years of age; n=1564 were >29 years of age; n=5412 were adults with no children of eligible age); ineligible country (n=908) or region (n=238)]

^dRespondent ineligible due to failing initial slider task to enter the survey (n=365), inconsistent country or language in screening (n=432), or failed third-party verification system for respondent authenticity (n=2680)

^eIncludes refusals (n=679 at parent level) and those who did not respond to the consent question (n=167 at parent level)

^fRespondent closed the survey before all screening questions were completed and eligibility determined (n=263 of which had parental consent but youth was not fully screened)

^gRespondent accessed the survey after the quota for their country was filled, and was thus unable to complete the survey [n=693 Canada (41 youth, 652 young adults), n=1700 England (122 youth, 1578 young adults), n=1051 US (131 youth, 920 young adults)]

NEW ZEALAND

In New Zealand, 6901 potential respondents accessed the survey link. A total of 3,093 surveys were completed (44.8% of those who accessed the survey link), and 894 were partially completed [dropouts (n=866) or terminated before completing the survey (n=28)]. A further 2045 were screened ineligible and terminated (including 466 who were flagged as data quality concerns for failing authenticity checks), 87 may have been eligible but they accessed the survey during a

brief period when the quota for their country was erroneously noted as filled, and 446 did not provide enough information to determine eligibility (due to closing the survey before completing all eligibility questions, or parent non-consent). Regarding consent, 71 parents and 273 respondents refused participation (n=344 total refusals) and a further 63 respondents and 18 parents reached the study information but did not consent. Of the 3093 completed surveys, n=2872 (92.9%) were retained for analysis.

TABLE 2: Dispositions of potential respondents in New Zealand who accessed the survey link (n=6,901)

Disposition	n	%
Eligible	4,323	62.6%
Complete	3093	43.8%
Consented, survey incomplete	894 ^a	13.0%
Screened eligible, did not consent	336 ^b	4.9%
Ineligible	2,045	29.6%
Screened ineligible	1579 ^c	22.9%
Inconsistent/quality issue	466 ^d	6.8%
Eligibility unknown	446	6.5%
Not fully screened, parent did not consent	89 ^e	1.3%
Not fully screened, eligibility unknown	357 ^f	5.2%
Over quota	87^g	1.3%
TOTAL	6,901	100%

^aIncludes n=28 respondents who were terminated (n=26 for refusing a key item, n=2 flagged by the survey panel for quality or other reasons)

^bIncludes refusals (n=273 at respondent level) and those who did not respond to the consent question (n=63 at respondent level)

^cRespondent screened ineligible [due to ineligible age (n=46 were <16 years of age; n=60 were >29 years of age; n=1410 were adults with no children of eligible age); ineligible country (n=56) or region (n=7)]

^dRespondent ineligible due to failing initial slider task to enter the survey (n=37), inconsistent country in screening (n=54), or failed third-party verification system for respondent authenticity (n=375)

^eIncludes refusals (n=71 at parent level) and those who did not respond to the consent question (n=18 at parent level)

^fRespondent closed the survey before all screening questions were completed and eligibility determined (n=26 of which had parental consent but youth was not fully screened)

^gRespondent accessed the survey during a brief period when the quota for their country erroneously noted as filled, and was thus unable to complete the survey [n=87 (3 youth, 84 young adults)]

AUSTRALIA

In Australia, 10,048 potential respondents accessed the survey link. A total of 3,152 surveys were completed (31.4% of those who accessed the survey link), and 864 were partially completed [dropouts (n=822) or terminated before completing the survey (n=42)]. A further 4,289 were screened ineligible and terminated (including 787 who were flagged as data quality concerns for failing authenticity checks), and 1,401 did not provide enough information to determine eligibility (due to closing the survey before completing all eligibility questions, or parent non-consent). Regarding consent, 54 parents and 287 respondents refused participation (n=341 total refusals) and a further 55 respondents and 10 parents reached the study information but did not consent. Of the 3,152 completed surveys, n=2778 (88.1%) were retained for analysis.

TABLE 3: Dispositions of potential respondents in Australia who accessed the survey link (n=10,048)

Disposition	n	%
Eligible	4,358	43.4%
Complete	3152	31.4%
Consented, survey incomplete	864 ^a	8.6%
Screened eligible, did not consent	342 ^b	3.4%
Ineligible	4,289	42.7%
Screened ineligible	3502 ^c	34.9%
Inconsistent/quality issue	787 ^d	7.8%
Eligibility unknown	1,401	13.9%
Not fully screened, parent did not consent	64 ^e	0.6%
Not fully screened, eligibility unknown	1337 ^f	13.3%
TOTAL	10,048	100%

^aIncludes n=42 respondents who were terminated (n=40 for refusing a mandatory item, n=2 for quality or other reasons)

^bIncludes refusals (n=287 at respondent level) and those who did not respond to the consent question (n=55 at respondent level)

^cRespondent screened ineligible [due to ineligible age (n=130 were <16 years of age; n=1083 were >20 years of age; n=2254 were adults >29 with no children of eligible age); ineligible country (n=28) or region (n=7)]

^dRespondent ineligible due to failing initial slider task to enter the survey (n=79), inconsistent country or language in screening (n=111), or failed third-party verification system for respondent authenticity (n=597)

^eIncludes refusals (n=54 at parent level) and those who did not respond to the consent question (n=10 at parent level)

^fRespondent closed the survey before all screening questions were completed and eligibility determined (n=23 of which had parental consent but youth was not fully screened)

^gRespondent accessed the survey after the quota for their country was filled, and was thus unable to complete the survey

PARTICIPATION RATE

For commercial panels that include non-probability based samples, the American Association for Public Opinion Research (AAPOR) recommends reporting the ‘participation rate’, also referred to as a ‘completion rate’. The participation rate is defined as “the number of respondents who have provided a usable response divided by the total number of initial personal invitations requesting participation”.⁶ Participation rates are largely a product of sample management and the amount of sample that is ‘released’ prior to reaching target quotas. In the three countries (Canada, England, US), of the 162,188 invitations sent to panelists, 15,047 respondents completed the survey and were retained in the sample, for a total participation rate of 9.3%.

CO-OPERATION RATE

The cooperation rate represents “the proportion of all cases interviewed of all eligible units ever contacted”.⁶ Across the three countries (Canada, England, US), the respondent-level cooperation rate was 71.5%, which was calculated based on AAPOR Cooperation Rate #1, as the percentage of respondents who completed the survey (n=16,495) of those eligible who accessed the survey link (n=23,065). In New Zealand, the respondent-level cooperation rate (AAPOR Cooperation Rate #1) was 71.5%, from 3093 respondents who completed the survey out of 4323 eligible who accessed the survey link. In Australia, the respondent-level cooperation rate (AAPOR Cooperation Rate #1) was 72.3%, from 3152 respondents who completed the survey out of 4358 eligible who accessed the survey link.

SAMPLE CHARACTERISTICS

Table 2 presents the characteristics of the unweighted youth sample, in each country and overall.

⁶ The American Association for Public Opinion Research. 2016. Standard Definitions: Final Dispositions of Case Codes and Outcome Rates for Surveys. 9th edition. AAPOR. Available at: https://www.aapor.org/AAPOR_Main/media/publications/Standard-Definitions20169theditionfinal.pdf

TABLE 2: Sample characteristics, youth aged 16-19, overall and by country, unweighted (n=16,038)

¹Determined by response to “sex at birth” for most respondents; where sex at birth was missing, inferred from gender if “man” or “woman” selected

²Includes responses “gender queer/gender non-conforming” and “different identity”

³Determined by response to detailed country-specific questions that asked about race/ethnicity with multiple categories, then categorized into those who specified only white/European, or any other response

SURVEY WEIGHTS

YOUTH AGED 16-19

In Wave 8, post-stratification sample weights were constructed based on population estimates for sociodemographic variables; Wave 1 estimates for student status and academic grades in Canada, England and the US, and Wave 7 (first New Zealand wave) estimates for student status in New Zealand; and, calibration to the trend over time for smoking in the last 30 days indicated by the National Youth Tobacco Survey (NYTS) in the US, the Canadian Student Tobacco, Alcohol and Drugs Survey (CSTADS) in Canada, and the New Zealand Health Survey (NZHS) in New Zealand, and calibration for smoking in the last 30 days in Australia to the current smoking rate among 16-19 year old respondents from the National Drug Strategy Household Survey (NDSHS). The NDSHS definition of currently smokes is “Includes people who reported smoking daily, weekly or less than weekly”. The NDSHS rate includes other tobacco products as well as cigarettes.

Respondents were classified into sex-by-age-by-region groups in Canada, England and Australia, sex-by-age-by-region and race-by-region groups in the US (this is a change from previous waves in the US where respondents had been classified in sex-by-age-by-region-by-race groups), and sex-by-race groups and groups for each year of age in New Zealand, where: sex was male or female; age was 16-17 or 18-19 for Canada, England, and the US, and age was 16, 17, 18, or 19 for New Zealand and Australia; race/ethnicity was White/Caucasian only or Other in the US, and European, Māori, Pacific, Asian, or Middle Eastern/Latin American/African/ Other (MELAA/Other) in New Zealand; and, geographic region was specific to each country [US: New England, Middle Atlantic, East North Central, West North Central, South Atlantic, East South Central, West South Central, Mountain, Pacific; Canada: Atlantic, Quebec, Ontario, Prairies, British Columbia; England: North East, North West, Yorkshire and the Humber, East Midlands, West Midlands, East of England, London, South East,

South West; Australia: New South Wales, Queensland, South Australia, Victoria, Western Australia, Tasmania/Northern Territory/Australian Capital Territory. Note: Western Australia was merged with the grouped regions (Tas/NT/ACT) among 19 year old males due to small cell sizes.]. Calibration/target figures for the demographic variables were obtained from the US Census Bureau, Population Division, State Characteristics Population Estimates⁷ in the US (for mid-2023); Statistics Canada's Annual Population Estimates on July 1st by age and sex⁸ in Canada (for mid-2024); the Office for National Statistics Estimates of the population for the UK, England and Wales, Scotland and Northern Ireland⁹ in England (for mid-2022); Stats NZ in New Zealand, Aotearoa Data Explorer^{10,11} (2023 census); and, from the Australian Bureau of Statistics National, state and territory population in Australia (for mid-2023)¹². Cross-classifications were of region (in CA/EN/US/AU), sex, age group (16-17 and 18-19 in CA/EN/US) or single year of age (NZ/AU), and race/ethnicity (in the US and NZ).

Respondents were also classified by student status (student vs. not) (Canada, England, the US, and New Zealand only), school grades (<70%, don't know, and refused; 70- 79%; 80-89%; 90-100%) (Canada, England, and the US only), and past 30-day smoking status (Canada, the US, New Zealand, and Australia only). In the US, Canada, New Zealand, and Australia, nationally representative estimates from the NYTS, CSTADS, NZHS, and NDSHS (the national monitoring surveys in each country), were used to calibrate to the trend over time for past 30-day smoking with the exception of Australia where the exact smoking rate from the NDSHS was used; the data from England were not calibrated to an external trend as there was no benchmark survey available for England in the relevant age range (16- to 19-year-olds). Briefly, the percent change in the past 30-day smoking rate observed in the national monitoring surveys was applied to our Wave 1 estimates (estimates from 2017 for Canada and the US, from 2023 for New Zealand and from 2024 for Australia), providing target rates for weighting subsequent waves; Wave 1 was not adjusted in any way, except in Australia. For Canada, the most recent CSTADS data are from 2018/19 and 2021/22. The yearly rate of decline from the most recent CSTADS data was applied to the youth data to estimate the target smoking rate for weighting. In the US, the most recent NYTS data, which are collected yearly, are from 2024. The rates of change from the NYTS waves are used directly to calculate the smoking rates used to weight each wave of the ITC survey. Wave 8 was based on the yearly rate change from 2023 NYTS to 2024 NYTS. A publication of 2024 NYTS results that reported the smoking rate for grades 9-12¹³ was used to calculate the yearly rate of change from 2023 NYTS to 2024 NYTS prior to the release of the 2024 NYTS dataset. Since the NYTS smoking rates that we have calculated from past cycles were among respondents aged 16-19, the 2024 NYTS smoking rate among respondents aged 16-19 was estimated by comparing the smoking rates of those aged 16-19 to those in grades 9-12 in past NYTS waves. Once the 2024 NYTS dataset is available, we will compare the actual smoking rate among respondents

aged 16-19 from the 2024 NYTS dataset to our estimate to determine if they are similar. In New Zealand, at the time the youth weights were created, the most recent NZHS data, which are collected yearly, are from 2022/23. The yearly rate of decline from the 2020/21 and 2022/23 waves of NZHS was applied to the youth data to estimate the target smoking rate for weighting. In Australia, the ITC youth past 30-day smoking rate was weighted to the proportion of tobacco product use, defined as daily, at least weekly, less often than weekly use of cigarettes, pipes, and other tobacco products, for ages 16-19, from the NDSHS. The sample distribution for student status and school grades was scaled to Wave 1 for Canada, England, and the US (because later waves of the sample included more non-students and more respondents with lower academic grades), thus maintaining greater consistency in the sample across waves. Similarly, the sample distribution for student status was scaled to Wave 7 (2023) for New Zealand, as that was the first wave of New Zealand data. Note: a version of the weights was also created that did not calibrate to the past 30-day smoking trend in the US, Canada and New Zealand, or to the past 30-day smoking rate in Australia; this is used only for comparative analyses.

Separately for each country, a raking algorithm was applied to compute weights calibrated to the groupings (sex-by-age-by-region in Canada, England, and Australia, sex-by-age-by-region and race-by-region in the US, and sex-by-race in New Zealand); each year of age in New Zealand; student status (in CA/EN/US/NZ); school grades (in CA/EN/US); and past 30-day smoking status in Canada, the US, New Zealand, and Australia). The SAS macro "RAKE_AND_TRIM_G4_V5"¹⁴ was used, with trimming to 5 (rescaled) in the US. Please note that trimming was also set to the usual value of 5 for Canada, England, New Zealand, and Australia, although none of these countries needed trimming in Wave 8. Finally, the weights were rescaled to the sample size within each country.

YOUNG ADULTS AGED 20-29

NOTE: The method of calculating the past 30-day smoking rate that the young adult weights adjust to has been revised in Wave 8 in Canada, England and the US. For consistency, the young adult weights in these three countries (CA/EN/US) for previous waves (Waves 4, 6, and 7) were also revised with the updated past 30-day smoking rates.

In Wave 8, post-stratification sample weights were constructed based on population estimates for sociodemographic variables; and calibration to the rate of smoking in the last 30 days indicated by the National Health Interview Survey (NHIS) in the US, the Canadian Community Health Survey (CCHS) in Canada, the Annual Population Survey (APS) in England, and the New Zealand Health Survey (NZHS) in New Zealand. Respondents were classified into sex-by-age-by-region groups in Canada, England and the US, race-by-region groups in the US, and sex-by-age-by-race groups in New Zealand, where: sex was male or female; age was 20-24 or 25-29; race/ethnicity was White/Caucasian only or Other in the US, and European, Māori, Pacific, or Asian/Middle Eastern/Latin American/African/Other (Asian/MELAA/Other) in New Zealand; and, geographic region was specific to each country (as described above for youth, with the exception that four regions instead of nine were used for the US young adult weights: Northeast, Midwest, South, and West). Calibration/target figures for the demographic variables were obtained from the US Census Bureau, Population Division, State Characteristics Population Estimates in the US (for mid-2023)⁷; Statistics Canada's Annual Population Estimates on July 1st by age and sex in Canada (for mid-2024)⁸; from the Office for National Statistics Estimates of the population for the UK, England and Wales, Scotland and Northern Ireland in England (for mid-2022)⁹; and from Stats NZ in New Zealand, Aotearoa Data Explorer (2023 census)¹⁰. Cross-classifications were of region (in CA/EN/US), sex, age group (20-24 and 25-29), and race/ethnicity (in the US and New Zealand).

Nationally representative estimates from the NHIS, CCHS, APS, and NZHS (the national monitoring surveys in the US, Canada, England, and New Zealand, respectively), were used to calibrate to the trend over time for past 30-day smoking.

¹⁴ The macro was obtained from https://www.abtassociates.com/sites/default/files/files/Insights/Tools/rake_and_trim_G4_V5.sas, with further documentation available at https://www.abtassociates.com/sites/default/files/files/Insights/Tools/SD_62_2017.pdf.

Briefly, in Canada and England, in Wave 4 (2020), which was the first wave of young adult data collection for those countries, the past 30-day smoking rate was weighted to the smoking rate from the national monitoring surveys (CCHS in Canada and APS in England). Specifically, the smoking rates used were the percentage of 18- to 34-year-olds who smoke daily or occasionally according to the 2020 CCHS in Canada, and the percentage of 18- to 34-year-olds who smoke nowadays according to the 2020 APS in England (calculated from the 18- to 24-year-old rate and the 25- to 34-year-old rate). In the US, in Wave 4 (2020), the current smoking rate (smoked in the past 30 days and smoked 100 or more cigarettes in their lifetime) was weighted to the current smoking rate (smoked every day or some days and smoked 100 or more cigarettes in their lifetime) from the NHIS. In the first wave of young adult data collection in New Zealand, Wave 7 (2023), the young adult weights did not adjust by smoking rate. In all subsequent waves in all countries, the percent change in the smoking rate observed in the national monitoring surveys was applied to our past 30-day smoking rate estimates from the previous wave; even in the US, where the weights for the first wave [Wave 4 (2020)] were adjusted to the current smoking rate, the weights in all subsequent waves were adjusted to the past 30-day smoking rate. The 2-year rates of change from 2021 NHIS to 2023 NHIS¹⁵, 2021 CCHS to 2023 CCHS¹⁶, 2021 APS to 2023 APS¹⁷, and 2021/22 NZHS to 2023/24 NZHS¹⁸ were applied to the Wave 8 young adult data, after calculating the respective yearly rates of change based on those 2-year rates of change, to estimate the target smoking rate for weighting for the US, Canada, England, and New Zealand, respectively.

As was done with the youth, a version of the weights was also created that did not calibrate to the past 30-day smoking status for Canada, England, the US, and New Zealand; this is used only for comparative analyses.

Separately for each country, a raking algorithm was applied to compute weights calibrated to the groupings sex-by-age-by-region in Canada, England*, and the US, race-by-region in the US, and sex-by-age-by-race in New Zealand; and past 30-day smoking status. The SAS macro “RAKE_AND_TRIM_G4_V5”¹⁴ was used, with trimming to 5 (rescaled) if necessary. Finally, the weights were rescaled to the sample size within each country.

*Note: The following categories were collapsed within-country for the sex-by-age-by-region variable: England (collapsed each male age group to four regions rather than nine: North and Yorkshire (North East, North West, and Yorkshire), Midlands (East and West Midlands), South (East, South East, and South West), and London), and in Canada age groups 20-24 and 25-29 were collapsed among males in the Atlantic provinces. The following categories were collapsed within New Zealand for the sex-by-age-by-race variable: MELAA/Other and Asian in the ethnicity variable due to small cell sizes in the MELAA/Other among both sexes and age groups.

PARENT INFO	<p>[IF RESPONDENT ONLY HAS ONE CHILD AGE 16-19 (CHILD NUMBER=1):] We would like to conduct a survey with your child who is age 16-19.</p> <p>[IF RESPONDENT HAS MORE THAN ONE CHILD AGE 16-19 (CHILD NUMBER=2 OR 3):] You indicated that you have more than one child aged 16-19. We would like to conduct a survey with the child aged 16-19 whose birthday is coming up next.</p> <p>[ALL RESPONDENTS WITH CHILDREN AGE 16-19 (CHILD AGE=3):] The purpose of this study is to examine behaviours related to the use of cigarettes, e-cigarettes/vaping devices, and marijuana among youth in Canada, England, the United States, Australia, and New Zealand. We are interested in the opinions of ALL youth, NOT just those who use these products. Your child's participation will help researchers examine the potential impact of different health policies.</p> <p>This research study is being led [NZ: internationally] by Professor David Hammond at the University of Waterloo, Canada, [NZ: and in Aotearoa/New Zealand by Professor Richard Edwards at the University of Otago].</p> <p>This survey will take about 20 minutes to complete.</p> <p>As a thank you for your child's participation, the survey firm [CA/EN/US:(either Nielsen or your panel provider)] will provide you with your usual compensation.</p> <p>Some questions are required to complete the survey; for all other questions, your child's participation is completely voluntary. Your child can refuse to answer any question he/she does not wish to answer, and can withdraw participation at any time.</p>	<p>[IF RESPONDENT ONLY HAS ONE CHILD AGE 16-19 (CHILD NUMBER=1):] Nous aimerions mener un sondage auprès de votre enfant qui a 16 à 19 ans.</p> <p>[IF RESPONDENT HAS MORE THAN ONE CHILD AGE 16-19 (CHILD NUMBER=2 OR 3):] Vous avez indiqué que vous avez plus d'un enfant âgé de 16 à 19 ans. Nous aimerions mener un sondage <u>avec celui qui aura son anniversaire prochainement.</u></p> <p>[ALL RESPONDENTS WITH CHILDREN AGE 16-19 (CHILD AGE=3):] L'objectif de cette étude consiste à examiner les comportements relatifs à l'utilisation de cigarettes, de cigarettes électroniques/de dispositifs de vapotage et de marijuana chez les jeunes au Canada, en Angleterre, aux États-Unis, en Australie, et en Nouvelle-Zélande. Nous intéressons aux opinions de tous les jeunes, pas seulement ceux qui utilisent ces produits. La participation de votre enfant aidera les chercheurs à se pencher sur l'incidence éventuelle des différentes politiques en matière de santé.</p> <p>L'étude est dirigée par le professeur David Hammond de l'Université de Waterloo au Canada.</p> <p>Environ 20 minutes seront requises pour répondre à toutes les questions.</p> <p>En guise de remerciement de la participation de votre enfant, la firme de sondages (Nielsen ou fournisseur du panel) fournira la rémunération qui est normalement due au membre du panel.</p> <p>La participation de votre enfant est complètement facultative. Certaines questions sont obligatoires. Pour toutes les autres, libre à votre enfant de refuser de répondre à toute question à laquelle il/elle ne souhaite pas répondre; et il/elle peut se retirer de l'enquête à tout moment.</p>

All of the information your child provides will be grouped with responses from other participants, which means that there will be no way to identify participants individually from the reports we create. Your child will not be asked to provide their name, address, or telephone number. For more information about privacy in connection with this study, please read and have your child read the survey. Privacy Notice, also linked at the bottom of this page. The data will be stored for a minimum of 7 years on a secure University of Waterloo server. Researchers will not retain internet protocol (IP) addresses or other information which could link your child's participation to a computer or electronic device. Please note that while we implement security safeguards designed to protect all survey data, when information is transmitted over the internet, there is still a risk your child's responses may be intercepted by a third party (e.g., government agencies, hackers). The questions you have answered up to this point are for the survey firm, and will not be shared with the researchers.

[NZ: Ethnicity identifiers and Māori/Pacific participant question specific data will be removed from the main dataset and stored separately at the University of Otago. Any proposals for use by researchers from outside New Zealand of any of the data which includes Māori specific analysis must be reviewed and approved by a committee including Māori researchers.]

Toutes les informations fournies par votre enfant seront regroupées avec les réponses des autres participants, ce qui signifie qu'il n'y aura aucun moyen d'identifier les participants individuellement à partir des rapports que nous créons. Votre enfant n'aura pas à fournir son nom, son adresse, ni son numéro de téléphone. Pour de plus amples renseignements sur la confidentialité de la présente étude, veuillez lire l'Avis de confidentialité joint dans le bas de la page et faites le lire à votre enfant. Les données seront conservées pendant au moins 7 ans, et ce, sur un serveur sécurisé à l'Université de Waterloo. Les chercheuses et les chercheurs ne garderont pas les adresses de protocole Internet (IP) ni d'autres renseignements qui pourraient permettre d'établir un lien entre la participation de votre enfant et votre ordinateur ou tout autre dispositif électronique. Même si nous utilisons des mesures de sécurité pour protéger tous les renseignements de votre enfant, lorsque des renseignements sont transmis sur Internet, il y a toujours un risque qu'une tierce partie intercepte les réponses de votre enfant (p. ex., des organismes gouvernementaux, des pirates informatiques). Les réponses aux questions jusqu'ici sont pour la firme de sondages et ne seront pas partagées avec les chercheurs.

L'étude a été examinée et a été approuvée par le comité de l'éthique en recherche de l'Université de Waterloo (ORE#31017). Si vous avez des questions à poser au comité de la recherche en éthique de l'Université de Waterloo, communiquez avec le bureau de l'éthique en recherche au 1 519 888-4567, poste 36005, ou écrivez à l'adresse reb@uwaterloo.ca. Si vous avez toute autre question au sujet de cette étude, veuillez communiquer avec le professeur David Hammond de l'Université de Waterloo en composant le 1 519 888-4567, poste 46462, ou en écrivant à dhammond@uwaterloo.ca.

HEATED TOBACCO PRODUCTS

HTP_INTRO	The next questions are about HEATED TOBACCO PRODUCTS.	Les questions suivantes portent sur LES PRODUITS DE TABAC CHAUFFÉ.
-----------	---	--

	<p>These devices heat ACTUAL TOBACCO (in sticks or capsules) to create an aerosol that is inhaled. These are NOT THE SAME as e-cigarettes, which use liquids.</p> <p>Heated tobacco products include brands like IQOS ([AU/CA/UK/NZ: HEETS; US: Marlboro HeatSticks]).</p> <p>[country-specific image of IQOS and HEETS/HeatSticks]</p> 	<p>Ces appareils chauffent du VRAI TABAC (en bâtonnets ou en capsules) pour créer un aérosol qui est inspiré. Ce NE SONT PAS LES MÊMES que les cigarettes électroniques, qui se servent de liquides.</p> <p>Les produits de tabac chauffé incluent des marques comme IQOS (HEETS).</p>
