

INTERNATIONAL TOBACCO CONTROL POLICY EVALUATION PROJECT (ITC)

Youth and Young Adult Tobacco & Vaping Survey

PRELIMINARY TECHNICAL REPORT – WAVE 7 (2023 - August)

NOVEMBER 30, 2023 (UPDATED APRIL 2025)

ACKNOWLEDGEMENTS

THIS SURVEY WAVE, AS WELL AS THE ITC YOUTH TOBACCO AND VAPING SURVEY ANNUAL WAVES 1-4, 6, AND 7 WERE SUPPORTED BY A P01 GRANT (1P01CA200512) FROM THE US NATIONAL INSTITUTES OF HEALTH. WAVE 7 IN NEW ZEALAND WAS SUPPORTED BY THE US NATIONAL CANCER INSTITUTE (NCI) AND FDA CENTER FOR TOBACCO PRODUCTS (CTP; 3P01CA200512-07S1). SURVEY WAVES 3.5, 4.5, AND WERE SUPPORTED BY A CONTRIBUTION FROM HEALTH CANADA'S SUBSTANCE USE AND ADDICTIONS PROGRAM (SUAP). THE CONTENT IS SOLELY THE RESPONSIBILITY OF THE AUTHORS AND DOES NOT NECESSARILY REPRESENT THE VIEWS OF THE FUNDERS.

APPENDIX A: WAVE 7 QUESTIONNAIRE 18

INTRODUCTION

The global nicotine market is rapidly evolving due to the emergence of vaporized nicotine products (VNPs), such as e-cigarettes. Regulators are considering a broad range of policies to minimize youth uptake of VNPs, particularly with regards to restrictions on forms of promotion and product attributes that may enhance appeal among youth. The International Tobacco Control Policy Evaluation Project (ITC) Youth and Young Adult Tobacco and Vaping Survey is examining uptake of e-cigarettes and other novel nicotine products among youth in three countries with very different policy environments: the United States (US), Canada, and England. Overall, the project seeks to increase the understanding of the factors that predict uptake among youth and to examine policy measures that influence prevalence and patterns of use.

The overall study consists of prospective cohorts and repeated cross-sections, to examine changes over time in the US, England, and Canada. The baseline wave (Wave 1) was recruited in 2017, with annual waves conducted thereafter. The cohort portion of the design was discontinued in Wave 4 due to low follow-up rates; the repeated cross-sectional surveys continued. In addition, semi-annual waves were added in 2020, between Waves 3 and 4 (Wave 3.5), and between Waves 4 and 5 (Wave 4.5). Sample sizes vary across waves due to supplemental funding to oversample individual US states and/or Canadian provinces in some waves. Starting in Wave 6, the study was extended as the ITC Youth and Young Adult Tobacco and Vaping Survey, including samples of young adults in each country in subsequent waves. In Wave 7, the survey also included youth and young adults in New Zealand.

This technical report describes the methods for Wave 7 data collection from youth and young adults in the three countries (Canada, England, US), as well as New Zealand.

STUDY PROTOCOL

OVERVIEW

Data were collected via a self-completed online survey, conducted from August 2 to September 4, 2023 in the three countries and from August 2 to September 18, 2023 in New Zealand. Participants were youth aged 16-19 and young adults aged 20-29 in Canada, England, the US, and New Zealand who were members of consumer panels.

SAMPLE AND RECRUITMENT

The sample was recruited from the Nielsen Consumer Insights Global Panel, which maintains panels in the US, Canada, and England, as well as their partners' panels. The Nielsen panel is recruited using both probability and non-probability sampling methods in each country. Nielsen selected random samples from the online panel(s) in each country.

Recruitment targets at each wave included 4,500 respondents aged 16-19 and, starting in Wave 6, 1000 young adults aged 20-29 in each of Canada, England, and the United States. In Wave 7, youth and young adults aged 16-29 in New Zealand were recruited through Dynata and TGM Research.

Eligible respondents included youth aged 16 through 19 and young adults aged 20 through 29. Respondents were recruited either directly or through their parents (youth only). Email invitations (with a unique link) were sent to a random sample of panelists (after targeting for age criteria); panelists known to be ineligible were not invited. Panelists known to be parents were also contacted; those who confirmed they had one or more children aged 16-19 living in their household were asked for permission for their child to complete the survey (if more than one child, specifically the one whose birthday was coming up next). After eligibility screening, all potential respondents were provided with information about the study and were asked to provide consent before participating. In Waves 1 and 2, a restriction on small screen size was

applied to ensure that images presented in the survey could be viewed with a minimum amount of scrolling; however, this restriction was not applied to later waves.

In Waves 1 through 3.5, all respondents from previous waves who were still panel members were invited to participate. To replace those lost to follow-up, new respondents were recruited as outlined above, up to the target recruitment numbers (4,500 respondents in each of Canada, England, and the United States). In Wave 4, the longitudinal follow-up with respondents from previous waves was discontinued due to low follow-up rates.

PARTICIPANT REMUNERATION

Respondents received remuneration in accordance with their panel's usual incentive structure, which could include points-based or monetary rewards (redeemed for catalog items, as cash or donated) and/or chances to win monthly prizes.

ETHICS CLEARANCE

This study was reviewed and received ethics clearance through a University of Waterloo Research Ethics Committee (ORE#21847/31017).

SURVEY CONTENT

Participants completed a 20-minute survey, available in English in all countries, as well as French in Canada. The survey consisted of sociodemographic measures, questions on e-cigarette and tobacco use, with additional questions on other health behaviours, including marijuana use (*see Appendix A for full questionnaire*).

SURVEY CHANGES FROM WAVE 6

In Wave 7, items were added regarding quantities of each e-cigarette type (disposables, cartridges, tanks) used in the past 30 days; past 30-day use of "ice" e-cigarette flavours; perceived satisfaction of cigarettes and of vaping; sharing of vaping devices; vaping at school (both respondents' own behaviour and effects of others'); and noticing e-cigarettes on social media, including source(s). New Zealand-specific content was also added, including items regarding national policy measures, frequency of use items that matched existing national surveys (for comparability), adding specific options to cessation assistance lists, and local versions of existing items on brands, purchasing/refusal, and country-specific sociodemographic questions (including education, race/ethnicity, and Indigenous identity).

Some revisions were also made to existing content for Wave 7. The brand lists for cigarettes, e-cigarettes, heated tobacco products (HTPs), and oral nicotine pouches were updated, as were brand-specific follow-up items for HTPs and e-cigarette products (used and purchased), to reflect current product availability. The wording of items regarding purchase attempts for cigarettes and e-cigarettes was revised for all NZ respondents, as well as half of respondents in Canada, England and the US) (to gauge any effects of altering wording). The section with expanded content on oral nicotine pouches, which was shown to half of respondents (randomly assigned) in Wave 6 to gauge any effects of transitioning question type from inclusion as part of the list of other tobacco products to a detailed question section, was shown to all respondents this wave. Similarly, the updated images of e-cigarettes and device types that were shown to half of respondents (randomly assigned) in Wave 6 (to gauge any effect of updated images) were shown to all respondents in Wave 7.

Some content was removed in Wave 7, including items regarding “shortfill” e-liquids (asked in Waves 5 and 6), an England-specific follow-up question regarding specific JUUL device models (asked in Wave 6), cannabis and driving questions (asked since Wave 1), and items on awareness/beliefs about e-cigarettes that were specific to campaigns (and now no longer relevant).

Similar to in some previous waves (e.g., Wave 5), an experiment was inserted in this wave regarding standardized e-cigarette appearance. Respondents were shown images of four disposable vapes, according to one of two randomly assigned experimental conditions (original appearance vs standardized white) and asked which product(s) they would be interested in trying (with an option to say none). Respondents were also shown one vape (according to the same experimental condition) and asked about perceptions of harm relative to cigarettes.

DATA INTEGRITY CHECK

As a data integrity check, part of the way through the survey, respondents were asked to select the current month from a list. The month selected by the respondent was compared to the month when the survey was submitted. Respondents with month discrepancies were excluded from the analytic sample, unless the selected month was within two days of the date the survey was submitted (e.g., selected August but submitted on September 1st or 2nd).

QUESTIONNAIRE DEVELOPMENT

Measures were adapted from existing national benchmark surveys (e.g., Canadian Tobacco Alcohol and Drugs Survey (CTADS),¹ Canadian Student Tobacco Alcohol and Drugs Survey (CSTADS),² Population Assessment of Tobacco and Health (PATH) Study³), as well as previous versions of the ITC surveys.⁴ The same survey measures were used in all countries, with the exception of race/ethnicity, geographic region (i.e., province, state, or region), and education questions, which were based on census questions in each country (see *Appendix A*). Some New Zealand-specific items added in Wave 7 to assess national policy measures were from the adult ITC survey in NZ (EASE), and for comparability with national surveys.⁵

SAMPLE INFORMATION

PARTICIPATION

CANADA, ENGLAND, US

In the three countries, a total of 16,505 surveys were completed: 13,501 youth aged 16-19 (n=4499 in Canada, n=4500 in England, n=4502 in the US), and 3004 young adults aged 20-29 (n=1002 in Canada, n=1001 in England, n=1001 in the US). Respondents who provided an incorrect response to the data quality check question [n=646: n=507 youth (178 in Canada, 126 in England, 203 in the US); n=139 young adults (42 in Canada, 43 in England, 54 in the US)], or provided 5 or more invalid open-ended responses or a suspicious pattern of open-ended responses [n=88; n=55 youth (19 in Canada, 11 in England, 25 in the US) and 33 young adults (11 in Canada, 12 in England, 10 in the US)] were removed, as were participants who provided incomplete or invalid data on variables used for weighting^a [n=292: n=239 youth (79 in Canada, 73 in England, 87 in the US); n=53 young adults (12 in Canada, 20 in England, 21 in the US)]. A total of 15,479 respondents were retained for analysis (n=5160 in Canada; n=5216 in England; n=5103 in the US): 12,700 youth (n=4223 in Canada;

⁵ <https://www.health.govt.nz/publication/questionnaires-and-content-guide-2021-22-new-zealand-health-survey>

n=4290 in England; n=4187 in the US) and 2779 young adults (n=937 in Canada; n=926 in England; n=916 in the US).

NEW ZEALAND

In New Zealand, a total of 4000 surveys were completed: 1088 youth aged 16-19 and 2912 young adults aged 20-29. Respondents who provided an incorrect response to the data quality check question (n=416; n=36 youth and n=380 young adults or provided 5 or more invalid open-ended responses or a suspicious pattern of open-ended responses (n=107; n=13 youth and n=94 young adults) were removed, as were participants who provided incomplete or invalid data on variables used for weighting^b (n=63: n=18 youth and n=45 young adults). A total of 3414 respondents in New Zealand were retained for analysis: 1021 youth and 2393 young adults.

^aAge, country, geographic region, and ever smoking variables were mandatory responses in Wave 7. Weighting also required sex at birth (n=99 not specified and unable to be imputed from gender: 88 youth, 11 young adults) and last smoked (n=15 'Don't know' responses: 11 youth, 4 young adults), while ever vaping (n=88 'Don't know'/'Refused' responses: 71 youth, 17 young adults) and last vaped (n=90 'Don't know'/'Refused' responses: 69 youth, 21 young adults) were key variables required for inclusion in the dataset; respondents were excluded for missing one or more of these variables.

^bFor New Zealand, weighting required sex at birth (n=18 not specified and unable to be imputed from gender: 6 youth, 12 young adults) and last smoked (n=3 'Don't know' responses: 0 youth, 3 young adults), while ever vaping (n=24 'Don't know'/'Refused' responses: 7 youth, 17 young adults) and last vaped (n=18 'Don't know'/'Refused' responses: 5 youth, 13 young adults) were key variables required for inclusion in the dataset; respondents were excluded for missing one or more of these variables.

RESPONSE AND PARTICIPATION RATES

CANADA, ENGLAND, US

A total of 324,714 invitations were sent to panelists (150,527 directly to youth, 123,575 to parents, 50,612 to young adults): n=117,823 in Canada (44,548 youth, 52,863 parents, 20,412 young adults), n=109,628 in England (62,478 youth, 32,675 parents, 14,475 young adults), and n=97,263 in the US (43,501 youth, 38,037 parents, 15,725 young adults). Of these, 15,479 (4.8% of those invited) completed the survey and were retained for analysis: n=5160 in Canada (4.4% of those invited); n=5216 in England (4.8% of those invited); n=5103 in the US (5.2% of those invited).

Of the 324,714 total invitations, 42,105 potential respondents (13.0% of those invited) accessed the survey link: 9,201 did not make it through the sample management system screening prior to the survey system (6,041 were terminated due to ineligibility, and 3,160 dropped out prior to determining eligibility), and 32,904 entered the survey system. A total of 16,506 surveys were completed (39.2% of those who accessed the survey link), and 4,437 were partially completed (dropouts or flagged by the survey panel as data quality issues and terminated before completing the survey). In the survey system, a total of 5,079 were screened ineligible and terminated, 2,037 may have been eligible but their country quota was full, and a further 2,876 did not provide enough information to determine eligibility (due to closing the survey, parent non-consent, or being terminated before completing the eligibility questions). Regarding consent, 1,554 parents and 1,665 respondents refused participation (n=3219 total refusals) and a further 304 respondents and 323 parents reached the study information but did not consent. Of the 16,506 completed surveys, n=15,479 (95.4%) were retained for analysis.

TABLE 1: Dispositions of potential respondents in Canada, England, and US who accessed the survey link (n=42,105)

Disposition	Only accessed sample management system ^a		Accessed survey		TOTAL	
	n	%	n	%	n	%
Eligible	--	--	22,912	69.6%	22,912	54.4%

Consented, survey incomplete	--	--	4,437 ^b	13.5%	4,437	10.5%
Screened eligible, did not consent	--	--	1,969 ^c	6.0%	1,969	4.7%
Ineligible	6,041	65.7%	5,079	15.4%	11,120	26.4%
Screened ineligible	6,041 ^d	65.7%	4,721 ^e	14.3%	10,762	25.6%
Inconsistent/quality issue	--	--	358 ^f	1.1%	358	0.9%
Eligibility unknown	3,160	34.3%	2,876	8.7%	6,036	14.3%
Not fully screened, parent did not consent	--	--	1,877 ^g	5.7%	1,877	4.4%
Not fully screened, eligibility unknown	3,160 ^h	34.3%	999 ⁱ	3.0%	4,159	9.9%
Over quota	--	--	2,037^j	6.2%	2,037	4.8%
TOTAL	9,201	100%	32,904	100%	42,105	100%

^aTerminated in sample management system (by survey panel) prior to survey access

^bIncludes n=782 respondents who were terminated (n=208 for refusing a mandatory item, n=574 for quality or other reasons)

^cIncludes refusals (n=1665 at respondent level) and those who did not respond to the consent question (n=304 at respondent level)

^dTerminated in sample management system as ineligible

^eRespondent screened ineligible [due to ineligible age (n=201 were <16 years of age; n=1462 were >29 years of age; n=2089 were adults with no children of eligible age); ineligible country (n=761) or region (n=208)]

^fRespondent ineligible due to inconsistent country, region, or language in screening (n=205), or flagged by the survey panel as suspicious (n=153)

^gIncludes refusals (n=1554 at parent level) and those who did not respond to the consent question (n=323 at parent level)

^hDropped out while in sample management system, prior to survey access; eligibility unknown

ⁱRespondent closed the survey before all screening questions were completed and eligibility determined (n=275 of which had parent consent but youth was not fully screened)

^jRespondent accessed the survey after the quota for their country was filled, and was thus unable to complete the survey [n=906 Canada (276 youth, 630 young adults), n=959 England (169 youth, 790 young adults), n=172 US (35 youth, 137 young adults)]

NEW ZEALAND

In New Zealand, 9,046 potential respondents accessed the survey link: 2,714 did not make it through the sample management system screening prior to the survey system (1,865 were terminated due to ineligibility, and 849 dropped out prior to determining eligibility), and 6,332 entered the survey system. A total of 4,000 surveys were completed (44.2% of those who accessed the survey link), and 1,332 were partially completed (dropouts or flagged by the survey panel as data quality issues and terminated before completing the survey). In the survey system, a total of 328 were screened ineligible and terminated, and a further 280 did not provide enough information to determine eligibility (due to closing the survey, parent non-consent, or being terminated before completing the eligibility questions). Regarding consent, 73 parents and 290 respondents refused participation (n=363 total refusals) and a further 102 respondents and 13 parents reached the study information but did not consent. Of the 4,000 completed surveys, n=3414 (85.4%) were retained for analysis.

TABLE 2: Dispositions of potential respondents in New Zealand who accessed the survey link (n=42,108)

^aTerminated in sample management system (by survey panel) prior to survey access

^bIncludes n=163 respondents who were terminated (n=25 for refusing a mandatory item, n=138 for quality or other reasons)

^cIncludes refusals (n=290 at respondent level) and those who did not respond to the consent question (n=102 at respondent level)

^dTerminated in sample management system as ineligible

^eRespondent screened ineligible [due to ineligible age (n=20 were <16 years of age; n=30 were >29 years of age; n=151 were adults with no children of eligible age); ineligible country (n=31) or region (n=12)]

^fRespondent ineligible due to inconsistent country in screening (n=55), or flagged by the survey panel as suspicious (n=29)

^gIncludes refusals (n=73 at parent level) and those who did not respond to the consent question (n=13 at parent level)

^hDropped out while in sample management system, prior to survey access; eligibility unknown

ⁱ Respondent closed the survey before all screening questions were completed and eligibility determined (n=36 of which had parent consent but youth was not fully screened)

PARTICIPATION RATE

For commercial panels that include non-probability based samples, the American Association for Public Opinion Research (AAPOR) recommends reporting the 'participation rate', also referred to as a 'completion rate'. The participation rate is defined as "the number of respondents who have provided a usable response divided by the total number of initial personal invitations requesting participation".⁶ Participation rates are largely a product of sample management and the amount of sample that is 'released' prior to reaching target quotas. In the three countries (Canada, England, US), of the 324,714 invitations sent to panelists, 15,479 respondents completed the survey and were retained in the sample, for a total participation rate of 4.8%.

CO-OPERATION RATE

The cooperation rate represents "the proportion of all cases interviewed of all eligible units ever contacted".⁶ Across the three countries (Canada, England, US), the respondent-level cooperation rate was 72.0%, which was calculated based on AAPOR Cooperation Rate #1, as the percentage of respondents who completed the survey (n=16,506) of those eligible who accessed the survey link (n=22,912). In New Zealand, the respondent-level cooperation rate was 69.9%, which was calculated based on AAPOR Cooperation Rate #1, as the percentage of respondents who completed the survey (n=4000) of those eligible who accessed the survey link (n=5,724).

⁶ The American Association for Public Opinion Research. 2016. Standard Definitions: Final Dispositions of Case Codes and Outcome Rates for Surveys. 9th edition. AAPOR. Available at: https://www.aapor.org/AAPOR_Main/media/publications/Standard-Definitions20169theditionfinal.pdf

SAMPLE CHARACTERISTICS

Table 2 presents the characteristics of the unweighted youth sample, in each country and overall.

TABLE 2: Sample characteristics, youth aged 16-19, overall and by country, unweighted (n=13,721)

Characteristic	Canada (n=4,223)	England (n=4,290)	US (n=4,187)	CA/EN/US (n=12,700)	New Zealand (n=1,021)	Total (n=13,721)

¹Determined by response to “sex at birth” for most respondents; where sex at birth was missing, inferred from gender if “man” or “woman” selected

²Determined by response to detailed country-specific questions that asked about race/ethnicity with multiple categories, then categorized into those who specified only white/European, or any other response

NOTE: Estimates in this table have been updated from those previously published (see ‘Survey Weights’ section below)

SURVEY WEIGHTS

YOUTH AGED 16-19

In Wave 7, post-stratification sample weights were constructed based on population estimates for sociodemographic variables; Wave 1 estimates for student status and academic grades in Canada, England and the US; and, calibration to the trend over time for smoking in the last 30 days indicated by the National Youth Tobacco Survey (NYTS) in the US and the Canadian Student Tobacco, Alcohol and Drugs Survey (CSTADS) in Canada.

Respondents were classified into sex-by-age-by-region groups in Canada and England, sex-by-age-by-region-by-race groups in the US, and sex-by-race groups and groups for each year of age in New Zealand, where: sex was male or female; age was 16-17 or 18-19 for Canada, England, and the US, and age was 16, 17, 18, or 19 for New Zealand; race/ethnicity was White/Caucasian only or Other in the US, and European, Māori, Pacific, Asian, or Middle Eastern/Latin American/African/ Other (MELAA/Other) in New Zealand; and, geographic region was specific to each country [US: New England, Middle Atlantic, East North Central, West North Central, South Atlantic, East South Central, West South Central, Mountain, Pacific; Canada: Atlantic, Quebec, Ontario, Prairies, British Columbia; England: North East, North West, Yorkshire and the Humber, East Midlands, West Midlands, East of England, London, South East, South West]. Calibration/target figures for the demographic variables were obtained from the US Census Bureau, Population Division, State Characteristics Population Estimates⁷ in the US (for mid-2022); Statistics Canada’s Annual Population Estimates on July 1st by age and sex⁸ in Canada (for mid-2022); the Office for National Statistics Estimates of the population for the UK, England and Wales, Scotland and Northern Ireland⁹ in England (for mid-2021); and, from Stats NZ in New Zealand, specifically the sex-by-race target figures from the 2018 census¹⁰ and the target figures for age from the 2022 data from the experimental administrative population census.¹¹ Cross-classifications were of region (in CA/EN/US), sex, age group (16-17 and 18-19 in CA/EN/US) or single year of age (NZ), and race/ethnicity (in the US and NZ).

Respondents in Canada, England, and the US were also classified by student status (student vs. not), school grades (<70%, don’t know, and refused; 70- 79%; 80-89%; 90-100%), and past 30-day smoking status (Canada and the US only). In the US and Canada, nationally representative estimates from the NYTS and CSTADS (the national monitoring surveys in each country), were used to calibrate to the trend over time for past 30-day smoking; the data from England were not calibrated to an external trend as there was no benchmark survey available for England in the relevant age range (16- to 19-year-olds). Briefly, the percent change in the past 30-day smoking rate observed in the national monitoring surveys

was applied to our Wave 1 estimates, providing target rates for weighting subsequent waves; Wave 1 was not adjusted in any way. For Canada, the most recent CSTADS data are from 2018/19 and 2021/22. The yearly rate of decline from the most recent CSTADS data was applied to the youth data to estimate the target smoking rate for weighting. In the US, the most recent NYTS data, which are collected yearly, are from 2023. The rates of change from the NYTS waves are used directly to calculate the smoking rates used to weight each wave of the ITC survey. Wave 7 was based on the yearly rate change from 2022 NYTS to 2023 NYTS. A publication of 2023 NYTS results that reported the smoking rate for grades 9-12¹² was used to calculate the yearly rate of change from 2022 NYTS to 2023 NYTS prior to the release of the 2023 NYTS dataset. Since the NYTS smoking rates that we have calculated from past cycles were among respondents aged 16-19, the 2023 NYTS smoking rate among respondents aged 16-19 was estimated by comparing the smoking rates of those aged 16-19 to those in grades 9-12 in past NYTS waves. Once the 2023 NYTS dataset is available, we will compare the actual smoking rate among respondents aged 16-19 from the 2023 NYTS dataset to our estimate to determine if they are similar. The sample distribution for student status and school grades was scaled to Wave 1 for Canada, England, and the US (because later waves of the sample included more non-students and more respondents with lower academic grades), thus maintaining greater consistency in the sample across waves. The New Zealand data were not calibrated to student status, school grades, or external smoking trend, as 2023 was the first wave. Note: a version of the weights was also created that did not calibrate to the past 30-day smoking trend in the US and Canada; this is used only for comparative analyses.

Separately for each country, a raking algorithm was applied to compute weights calibrated to the groupings (sex-by-age-by-region in Canada and England, sex-by-age-by-region-by-race in the US, and sex-by-race in New Zealand); each year of age in New Zealand; student status (in CA/EN/US); school grades (in CA/EN/US); and past 30-day smoking status in Canada and the US). In the US, race was collapsed for certain categories due to small cell sizes in the following groups: males, both age groups, New England; males, both age groups, West North Central; males, age 18-19, Mountain; and, females age 16-17, West North Central. The SAS macro “RAKE_AND_TRIM_G4_V5”¹³ was used, with trimming to 6 (rescaled) in the US and trimming to 5 (rescaled) in New Zealand. Please note that trimming was set to the usual value of 5 for Canada and England, although neither country needed trimming in Wave 7. In the US, in Wave 7, the trimming was set to 6 because convergence in the raking algorithm could not be achieved with trimming set to 5. Finally, the weights were rescaled to the sample size within each country.

YOUNG ADULTS AGED 20-29

NOTE: The method of calculating the current smoking rate that the young adult weights adjust to in Canada, England and the US has been revised (2025).

In Wave 7, post-stratification sample weights were constructed based on population estimates for sociodemographic variables; and calibration to the rate of smoking in the last 30 days indicated by the National Health Interview Survey (NHIS) in the US, the Canadian Community Health Survey (CCHS) in Canada, and the Annual Population Survey (APS) in England. The New Zealand data were not calibrated to an external smoking trend, as 2023 was the first wave. Respondents were classified into sex-by-age-by-region groups in Canada, England and the US, race-by-region groups in the US, and sex-by-age-by-race groups in New Zealand, where: sex was male or female; age was 20-24 or 25-29; race/ethnicity was White/Caucasian only or Other in the US, and European, Māori, Pacific, Asian, or Middle Eastern/Latin American/African/Other (MELAA/Other) in New Zealand; and, geographic region was specific to each country (as

¹³ The macro was obtained from https://www.abtassociates.com/sites/default/files/files/Insights/Tools/rake_and_trim_G4_V5.sas, with further documentation available at https://www.abtassociates.com/sites/default/files/files/Insights/Tools/SD_62_2017.pdf.

described above for youth, with the exception that four regions instead of nine were used for the US young adult weights: Northeast, Midwest, South, and West). Calibration/target figures for the demographic variables were obtained from the US Census Bureau, Population Division, State Characteristics Population Estimates in the US (for mid-2022);⁷ Statistics Canada's Annual Population Estimates on July 1st by age and sex in Canada (for mid-2022);⁸ from the Office for National Statistics Estimates of the population for the UK, England and Wales, Scotland and Northern Ireland in England (for mid-2021);⁹ and from Stats NZ in New Zealand, specifically the sex-by-age-by-race target figures from the 2018 census,¹⁰ weighted up to the 2022 population size from the experimental administrative population census.¹¹ Cross-classifications were of region (in CA/EN/US), sex, age group (20-24 and 25-29), and race/ethnicity (in the US and New Zealand).

Nationally representative estimates from the NHIS, CCHS, and APS (the national monitoring surveys in the US, Canada, and England, respectively), were used to calibrate to the trend over time for past 30-day smoking. Briefly, in Wave 4 (2020), which was the first wave of data collection for young adults, current smoking rates (past 30-day smoking in Canada and England; smoked in the past 30 days and smoked 100 or more cigarettes lifetime in the US) were weighted to the smoking rates from the national monitoring surveys. Specifically, the smoking rates used were the percentage of 18- to 34-year-olds who smoked daily or occasionally according to the 2020 CCHS in Canada; the percentage of 18- to 34-year-olds who smoked nowadays according to the 2020 APS in England (calculated from the 18- to 24-year-old rate and the 25- to 34-year-old rate); and, the current smoking rate (smoked every day or some days and smoked 100 or more cigarettes in their lifetime) from the 2020 NHIS in the US. In the first wave of data collection in New Zealand [Wave 7 (2023)], the young adult weights were not adjusted for smoking rate. In all subsequent waves in all countries, the percent change in the smoking rate observed in the national monitoring surveys was applied to our past 30-day smoking rate estimates from the previous wave; even in the US, where the weights for the first wave [Wave 4 (2020)] were adjusted to the current smoking rate, the weights in all subsequent waves were adjusted to the past 30-day smoking rate. The 2-year rates of change from 2020 NHIS to 2022 NHIS,¹⁴ 2020 CCHS to 2022 CCHS,¹⁵ and 2020 APS to 2022 APS¹⁶ were applied to the Wave 7 young adult data, after calculating the respective yearly rates of change based on those 2-year rates of change, to estimate the target smoking rate for weighting for the US, Canada, and England, respectively. Note: as was done with the youth, a version of the weights was also created that did not calibrate for smoking; this is used only for comparative analyses.

Separately for each country, a raking algorithm was applied to compute weights calibrated to the groupings sex-by-age-by-region in Canada, England*, and the US, race-by-region in the US, and sex-by-age-by-race in New Zealand; and past 30-day smoking status (in CA/EN/US). The SAS macro "RAKE_AND_TRIM_G4_V5"¹³ was used, with trimming to 5 (rescaled) if necessary. Finally, the weights were rescaled to the sample size within each country.

*Note: The following categories were collapsed within-country for the sex-by-age-by-region variable: England (collapsed each male age group to four regions rather than nine: North and Yorkshire (North East, North West, and Yorkshire), Midlands (East and West Midlands), South (East, South East, and South West), and London). The following categories were collapsed within New Zealand for the sex-by-age-by-race variable: age groups 20-24 years and 25-29 years collapsed among males in the MELAA/Other race category due to small cell sizes.

PARENT INFO	[IF RESPONDENT ONLY HAS ONE CHILD AGE 16-19 (CHILD NUMBER=1):] We would like to conduct a survey with your child who is age 16-19. [IF RESPONDENT HAS MORE THAN ONE CHILD AGE 16-19 (CHILD NUMBER=2 OR 3):] You indicated that you have more than one child aged 16-19. We would like to conduct a survey with the child aged 16-19 <u>whose birthday is coming up next.</u> [ALL RESPONDENTS WITH CHILDREN AGE 16-19 (CHILD AGE=3):] The purpose of this study is to examine behaviours related to the use of cigarettes, e-cigarettes/vaping devices, and marijuana among youth in Canada, England, the United States, and New Zealand. We are interested in the opinions of ALL youth, NOT just those who use these products. Your child’s participation will help researchers examine the potential impact of different health policies. This research study is being led [NZ: internationally] by Professor David Hammond at the University of Waterloo, Canada, [NZ: and in Aotearoa/New Zealand by Professor Richard Edwards at the University of Otago]. This survey will take about 20 minutes to complete. As a thank you for your child’s participation, the survey firm [CA/EN/US:(either Nielsen or your panel provider)] will provide you with your usual compensation. Some questions are required to complete the survey; for all other questions, your child’s participation is completely voluntary. Your child can refuse to answer any question he/she does not wish to answer, and can withdraw participation at any time. All of the information your child provides will be grouped with responses from other participants, which means that there will be no way to identify participants individually from the reports we create. Your child will not be asked to provide their name, address, or	[IF RESPONDENT ONLY HAS ONE CHILD AGE 16-19 (CHILD NUMBER=1):] Nous aimerions mener un sondage auprès de votre enfant qui a 16 à 19 ans. [IF RESPONDENT HAS MORE THAN ONE CHILD AGE 16-19 (CHILD NUMBER=2 OR 3):] Vous avez indiqué que vous avez plus d’un enfant âgé de 16 à 19 ans. Nous aimerions mener un sondage <u>avec celui qui aura son anniversaire prochainement.</u> [ALL RESPONDENTS WITH CHILDREN AGE 16-19 (CHILD AGE=3):] L’objectif de cette étude consiste à examiner les comportements relatifs à l’utilisation de cigarettes, de cigarettes électroniques/de dispositifs de vapotage et de marijuana chez les jeunes au Canada, en Angleterre, aux États-Unis, et en Nouvelle-Zélande. Nous intéressons aux opinions de tous les jeunes, pas seulement ceux qui utilisent ces produits. La participation de votre enfant aidera les chercheurs à se pencher sur l’incidence éventuelle des différentes politiques en matière de santé. L’étude est dirigée par le professeur David Hammond de l’Université de Waterloo au Canada. Environ 20 minutes seront requises pour répondre à toutes les questions. En guise de remerciement de la participation de votre enfant, la firme de sondages (Nielsen ou fournisseur du panel) fournira la rémunération qui est normalement due au membre du panel. La participation de votre enfant est complètement facultative. Certaines questions sont obligatoires. Pour toutes les autres, libre à votre enfant de refuser de répondre à toute question à laquelle il/elle ne souhaite pas répondre; et il/elle peut se retirer de l’enquête à tout moment. Toutes les informations fournies par votre enfant seront regroupées avec les réponses des autres participants, ce qui signifie qu’il n’y aura aucun moyen d’identifier les participants individuellement à partir des rapports que nous créons. Votre enfant

INFO	Before you start the survey, please read the following information and let us know if you agree to participate. - The purpose of this study is to examine behaviours related to the use of cigarettes, e-cigarettes/vaping devices, and marijuana among youth in Canada, England, the United States, and New Zealand. Your participation will help researchers examine the potential impact of different health policies. - You will be asked questions about smoking and vaping behaviour, demographics, and beliefs about smoking and vaping. - This research study is being led [NZ: internationally] by Professor David Hammond at the University of Waterloo, Canada, [NZ: and in Aotearoa/New Zealand by Professor Richard Edwards at the University of Otago]. - As a thank you for participating, the survey firm (either Nielsen or your panel provider) will provide their usual compensation to the panel member. - The survey will take about 20 minutes to complete. - You must be between 16 and 29 years of age to participate in the study. - Participation is voluntary. Some questions are required to complete the survey; for all other questions, you can select 'refused' to any question you do not wish to answer, and the panel member will still receive remuneration. You can withdraw your participation at any time by not submitting your responses (e.g., by closing your browser); however, the panel member will not receive remuneration. If you complete the survey, but later wish to have your data deleted, you must contact the researcher or [CA,EN,US: Nielsen ; NZ: your panel provider] with your request within 3 months.	Avant que vous commenciez à répondre à l'enquête, veuillez lire les renseignements suivants et nous indiquer si vous acceptez d'y participer. - L'objectif de cette étude consiste à examiner les comportements relatifs à l'utilisation de cigarettes, de cigarettes électroniques/de dispositifs de vapotage et de marijuana chez les jeunes au Canada, en Angleterre, aux États-Unis, et en Nouvelle-Zélande. Votre participation aidera les chercheurs à se pencher sur l'incidence éventuelle des différentes politiques en matière de santé. - Des questions au sujet des comportements des fumeurs et des vapoteurs, d'aspects démographiques et des opinions à propos du tabagisme et du vapotage. - L'étude est dirigée par le professeur David Hammond de l'Université de Waterloo au Canada. - En guise de remerciement de votre participation, la firme de sondages (Nielsen ou fournisseur du panel) fournira la rémunération qui est normalement due au membre du panel. - Environ 20 minutes seront requises pour répondre à toutes les questions. - Seuls les gens de 16 à 29 ans sont admissibles à participer à l'étude. - La participation est facultative. Certaines questions sont obligatoires. Pour toutes les autres, libre à vous de sélectionner l'option « Je refuse de répondre » à toute question à laquelle vous ne souhaitez pas répondre; le membre du panel recevra tout de même votre rétribution. Vous pouvez vous retirer de l'enquête en ne répondant pas aux questions (par ex., en fermant votre navigateur). Cependant, dans ce cas, le membre

- All of the information you provide will be grouped with responses from other participants, which means that there will be no way to identify participants individually from the reports we create. You will not be asked to provide your name, address, or telephone number. For more information about your privacy in connection with this study, please see the Privacy Notice linked at the bottom of this page. The data you submit will be stored for a minimum of 7 years on a secure University of Waterloo server. Researchers will not retain internet protocol (IP) addresses or other information which could link your participation to your computer or electronic device. Please note that while we implement security safeguards designed to protect your data, when information is transmitted over the internet, privacy cannot be guaranteed. There is still a risk your responses may be intercepted by a third party (e.g., government agencies, hackers).
- [NZ : Ethnicity identifiers and Māori/Pacific participant question specific data will be removed from the main dataset and stored separately at the University of Otago. Any proposals for use by researchers from outside New Zealand of any of the data which includes Māori specific analysis must be reviewed and approved by a committee including Māori researchers.]
- [CA,EN,US: This study has been reviewed and received ethics clearance through a University of Waterloo Research Ethics Board (ORE#31017). If you have questions for the University of Waterloo Research Ethics Board, contact the Office of Research Ethics at 1-519-888-4567, ext. 36005 or reb@uwaterloo.ca.
- [NZ: This study has been approved by the University of Otago Human Ethics Committee, reference number 23/065. If you have any complaints or concerns about the ethical conduct of the research, you can contact the Committee through the Human Ethics Committee Administrator (ph +643 479 8256 or email gary.witte@otago.ac.nz). Any issues you raise will be treated in confidence and investigated and you will be informed of the outcome. This study has also been reviewed and received ethics clearance through a University of Waterloo Research Ethics Board (ORE#31017). If you have questions for the University of Waterloo Research Ethics Board, contact the Office of Research Ethics at 1-519-888-4567, ext. 36005 or reb@uwaterloo.ca.

du panel ne recevra pas de rétribution. Si vous répondez à l'enquête et que par la suite, vous désirez que vos données soient supprimées, il vous suffira d'en informer le chercheur ou Nielsen au cours des trois mois suivants.

- Tous vos renseignements seront regroupés avec les réponses des autres participants pour qu'il soit impossible de vous identifier personnellement. Vous n'aurez pas à fournir votre nom, votre adresse, ni votre numéro de téléphone. Pour de plus amples renseignements sur la confidentialité de la présente étude, veuillez lire l'Avis de confidentialité joint dans le bas de la page. Les données seront conservées pendant au moins 7 ans, et ce, sur un serveur sécurisé à l'Université de Waterloo. Les chercheuses et les chercheurs ne garderont pas les adresses de protocole Internet (IP) ni d'autres renseignements qui pourraient permettre d'établir un lien entre votre participation et votre ordinateur ou tout autre dispositif électronique. Lorsque des renseignements sont transmis sur Internet, la confidentialité ne peut être garantie. Même si nous utilisons des mesures de sécurité pour protéger tous les renseignements, il y a toujours un risque qu'une tierce partie intercepte vos réponses (p. ex., des organismes gouvernementaux, des pirates informatiques).
- L'étude a été examinée et a été approuvée par le comité de l'éthique en recherche de l'Université de Waterloo (ORE#31017). Si vous avez des questions à poser au comité de la recherche en éthique de l'Université de Waterloo, communiquez avec le bureau de l'éthique en recherche au 1 519 888-4567, poste 36005, ou écrivez à l'adresse reb@uwaterloo.ca.

Si vous avez toute autre question au sujet de cette étude, veuillez communiquer avec le professeur David Hammond de l'Université de Waterloo en composant le 1 519 888-4567, poste 46462, ou en écrivant à dhammond@uwaterloo.ca.

E-CIGARETTES: EVER & CURRENT USE

ECIG PREAMBLE (PATH)	The next questions are about vaping or use of electronic cigarettes, often called e-cigarettes. These are products where you inhale vapour instead of smoke. E-cigarettes or vaping devices can be bought as one-time, disposable products, or as re-usable kits with a cartridge, pod or tank. Some people refill their own cartridges or tanks with nicotine fluid, sometimes called "e-juice" or "e-liquid". The amount of nicotine can vary and some may not contain any nicotine at all.  DO NOT include vaping marijuana/cannabis or THC in this section – we will ask about that later. UNIVERSE: ALL	Les questions suivantes concernent le vapotage ou l'utilisation de cigarettes électroniques. Ce sont des produits au moyen desquels vous inhalez de la vapeur plutôt que de la fumée. Les cigarettes électroniques ou les dispositifs de vapotage peuvent être achetés à l'unité; il s'agit de produits jetables ou achetés en trousseaux réutilisables comprenant une cartouche ou un réservoir. Certaines personnes les remplissent elles-mêmes avec le liquide à la nicotine ou <i>liquide pour les cigarettes électroniques</i>. La quantité de nicotine peut varier, et certains n'en contiennent pas du tout.  N'incluez PAS le vapotage de marijuana, de cannabis ou de THC dans cette section – nous en poserons des questions plus tard. UNIVERSE: ALL
S_EBRAND1	Please name <u>up to 5</u> e-cigarette or vaping brands (type one name in each box below). HEATED TOBACCO PRODUCTS

HTP_INTRO	The next questions are about HEATED TOBACCO PRODUCTS. These devices heat ACTUAL TOBACCO (in sticks or capsules) to create an aerosol that is inhaled. These are NOT THE SAME as e-cigarettes, which use liquids. Heated tobacco products include brands like IQOS ([CA/UK/NZ: HEETS; US: Marlboro HeatSticks]). [country-specific image of IQOS and HEETS/HeatSticks] 	Les questions suivantes portent sur LES PRODUITS DE TABAC CHAUFFÉ. Ces appareils chauffent du VRAI TABAC (en bâtonnets ou en capsules) pour créer un aérosol qui est inspiré. Ce NE SONT PAS LES MÊMES que les cigarettes électroniques, qui se servent de liquides. Les produits de tabac chauffé incluent des marques comme IQOS (HEETS).

ORAL NICOTINE PRODUCTS

ONP_INTRO	The next questions are about NICOTINE POUCHES. These are small, white pouches that contain nicotine, and are placed in the mouth. Nicotine pouches are different from smokeless tobacco products like dip, chew, or snus because they DO NOT contain any tobacco. Some nicotine pouch brands include Zyn, On!, Velo, and Nordic Spirit.	Les questions suivantes portent sur LES SACHETS DE NICOTINE. Ceux-ci sont des petits sachets qui contiennent de la nicotine et sont mis en bouche. Les sachets de nicotine sont différents des produits du tabac sans fumée comme le tabac à chiquer, à priser humide ou le snus car ils NE contiennent PAS de tabac. Certaines marques de sachets de nicotine incluent Zyn, On!, Velo, et Nordic Spirit.
------------------	--	--

	 DO NOT include other types of pouches, such as snus or smokeless tobacco pouches, in this section – we will ask about that later.	 N'inclus PAS autres types de sachets, comme le snus ou les sachets du tabac sans fumée, dans cette section – nous en poserons des questions plus tard.
