

INTERNATIONAL TOBACCO CONTROL POLICY EVALUATION PROJECT (ITC)

Youth and Young Adult Tobacco & Vaping Survey

TECHNICAL REPORT – WAVE 9 (2025 - August)

FEBRUARY 17, 2026

ACKNOWLEDGEMENTS

THE ITC YOUTH TOBACCO AND VAPING SURVEY ANNUAL WAVES 1-4, AND 6-9 (IN CANADA, UK AND US) WERE SUPPORTED BY A P01 GRANT (1P01CA200512) FROM THE US NATIONAL INSTITUTES OF HEALTH. WAVES 3.5, 4.5, AND 5 WERE SUPPORTED BY A CONTRIBUTION FROM HEALTH CANADA'S SUBSTANCE USE AND ADDICTIONS PROGRAM (SUAP). DATA COLLECTION IN AUSTRALIA (WAVES 8-9) WAS SUPPORTED BY AN IDEAS GRANT FROM AUSTRALIA'S NATIONAL HEALTH AND MEDICAL RESEARCH COUNCIL. DATA COLLECTION IN NEW ZEALAND WAS SUPPORTED BY THE US NATIONAL CANCER INSTITUTE (NCI) AND FDA CENTER FOR TOBACCO PRODUCTS (CTP; 3P01CA200512-07S1) IN WAVE 7; ASPIRE AOTEAROA PROVIDED FUNDING THROUGH A GENEROUS DONATION FROM THE QUIT GROUP TO SUPPORT WAVE 9 FIELDWORK. THE CONTENT IS SOLELY THE RESPONSIBILITY OF THE AUTHORS AND DOES NOT NECESSARILY REPRESENT THE VIEWS OF THE FUNDERS.

APPENDIX A: WAVE 9 QUESTIONNAIRE	20

INTRODUCTION

The global nicotine market is rapidly evolving due to the emergence of vaporized nicotine products (VNPs), such as e-cigarettes. Regulators are considering a broad range of policies to minimize youth uptake of VNPs, particularly with regards to restrictions on forms of promotion and product attributes that may enhance appeal among youth. The International Tobacco Control Policy Evaluation Project (ITC) Youth and Young Adult Tobacco and Vaping Survey is examining uptake of e-cigarettes and other novel nicotine products among youth in three countries with very different policy environments: the United States (US), Canada, and England. Overall, the project seeks to increase the understanding of the factors that predict uptake among youth and to examine policy measures that influence prevalence and patterns of use.

The overall study consists of prospective cohorts and repeated cross-sections, to examine changes over time in the US, England, and Canada. The baseline wave (Wave 1) was recruited in 2017, with annual waves conducted thereafter. The cohort portion of the design was discontinued in Wave 4 due to low follow-up rates; the repeated cross-sectional surveys continued. In addition, semi-annual waves were added in 2020, between Waves 3 and 4 (Wave 3.5), and between Waves 4 and 5 (Wave 4.5). Sample sizes vary across waves due to supplemental funding to oversample individual US states and/or Canadian provinces in some waves. Starting in Wave 6, the study was extended as the ITC Youth and Young Adult Tobacco and Vaping Survey, including samples of young adults in each country in subsequent waves. In Waves 7 through 9, the survey also included youth and young adults in New Zealand, and youth in Australia were included beginning in Wave 8.

This technical report describes the methods for Wave 9 data collection from youth and young adults in the three countries (Canada, England, US), as well as New Zealand and Australia.

STUDY PROTOCOL

OVERVIEW

Data were collected via a self-completed online survey, conducted from August 1 to September 15, 2025 in Canada, England, the US, and Australia, and from August 28 to September 30, 2025 in New Zealand. Participants were youth aged 16-19 in Canada, England, the US, New Zealand and Australia, and young adults aged 20-29 in Canada, England, the US, and New Zealand, who were members of consumer panels.

SAMPLE AND RECRUITMENT

The sample was recruited from the Nielsen Consumer Insights Global Panel, which maintains panels in the US, Canada, England, and Australia, as well as their partners' panels. The Nielsen panel is recruited using both probability and non-probability sampling methods in each country. Recruitment targets at each wave included 4,500 respondents aged 16-19 and, starting in Wave 6, 1000 young adults aged 20-29 in each of Canada, England, and the United States. Starting in Wave 8, youth in Australia were included, with a recruitment target of 2000. Starting in Wave 7, youth and young adults aged 16-29 in New Zealand were recruited through Dynata and TGM Research.

Eligible respondents included youth aged 16 through 19 and young adults aged 20 through 29. Respondents were recruited either directly or through their parents (youth only). Panelists were invited through email invitations (with a unique link) or via their account (website or app), after targeting for age criteria; panelists known to be ineligible were not invited. Panelists known to be parents were also contacted; those who confirmed they had one or more children aged 16-19 living in their household were asked for permission for their child to complete the survey (if more than one child, specifically the one whose birthday was coming up next). After eligibility screening, all potential respondents were provided with information about the study and were asked to provide consent before participating. In Waves 1 and 2, a restriction on small screen size was applied to ensure that images presented in the survey could be viewed with a minimum amount of scrolling; however, this restriction was not applied to later waves.

In Waves 1 through 3.5, all respondents from previous waves who were still panel members were invited to participate. To replace those lost to follow-up, new respondents were recruited as outlined above, up to the target recruitment numbers (4,500 respondents in each of Canada, England, and the United States). In Wave 4, the longitudinal follow-up with respondents from previous waves was discontinued due to low follow-up rates.

PARTICIPANT REMUNERATION

Respondents received remuneration in accordance with their panel's usual incentive structure, which could include points-based or monetary rewards (redeemed for catalog items, as cash or donated) and/or chances to win monthly prizes.

ETHICS CLEARANCE

This study was reviewed and received ethics clearance through a University of Waterloo Research Ethics Committee (ORE#21847/31017), as well as the University of Otago Human Ethics Committee (reference number 23/065) and the University of Queensland (2023/HE002406).

SURVEY CONTENT

Participants completed a 20-minute survey, available in English in all countries, as well as French in Canada. The survey consisted of sociodemographic measures, questions on e-cigarette and tobacco use, with additional questions on other health behaviours, including marijuana use (*see Appendix A for full questionnaire*).

SURVEY CHANGES FROM WAVE 8

In Wave 9, items were added regarding proportion of cigarettes smoked that were illicit; e-cigarette device characteristics (rechargeable, refillable, settings, screens); awareness of disposable e-cigarette bans and effects on cigarette and e-cigarette use; perceived target age group for vaping ads; open-ended follow-up for what kind of NRT was used as a cessation method for cigarettes and e-cigarettes; utilization of a program providing vapes for smoking cessation (NZ only); and amounts used per day for HTP and ONP. The oral nicotine pouches section was expanded to include concurrent use of multiple pouches, and perceptions of relative harm compared to vaping. As part of a link with another ITC project, a set of questions was added which asked those who smoked or vaped about hypothetical effects of reduced availability of cigarettes and/or e-cigarettes, respectively, on their use of other products. Additional data quality measures were added, including year of birth (to compare with age), and use of AI in survey completion. Two question sets which had been asked in earlier waves were reintroduced, including items on respiratory health, and uploading photos of e-cigarettes devices and liquids, with an option to source online image if photos not possible added. Lastly, using a split-half method (where half of respondents were randomly assigned to the new content), a response option of pub/bar was added to purchase location questions for cigarettes and e-cigarettes; a response option of nicotine pouches was added to cessation methods for cigarettes and e-cigarettes, and wording describing e-cigarette types was updated.

Some revisions were also made to existing content for Wave 9. The brand lists for cigarettes, e-cigarettes, heated tobacco products (HTPs), and oral nicotine pouches were updated, as were brand-specific follow-up items for e-cigarettes, HTPs and nicotine pouches, to reflect current product availability. The images of e-cigarettes and device types were also updated to reflect current products available. More detail on lifetime use above 100 days was asked for all products (previously just e-cigarettes), and current frequency of use was asked for all products in all countries (previously just NZ). In the section reporting amount/volume of each device type used, options were added to allowing reporting of cartridges in puffs. In the section on perceptions of e-cigarettes, modern look was swapped out in favour of affordability.

Additional revisions were made in response to policy changes in the countries studied, primarily amending the countries where questions were asked, to ensure relevance. Existing questions regarding banning menthol cigarettes were asked in

Australia (and dropped from Canada and England); support for reduction in purchase places asked in all countries (previously just NZ); support for a smoke-free generation policy was asked in NZ and England only (rather than all countries); support for a nicotine-free generation policy was dropped for all; and, some NZ-specific policy questions (no longer relevant due to changes in the government's plans) were also dropped. Some items regarding Australian e-cigarette policy measures (prescription and pharmacy access) were updated to reflect current implementation.

Some content was removed in Wave 9 in order to reduce survey length, including recall of cigarette and e-cigarette brands and e-cigarette warnings; satisfaction rating for cigarettes; side effects of smoking and vaping; perceptions of using smoking and vaping, respectively, to avoid weight gain; perceptions of and support for low-nicotine cigarettes; brands of e-cigarettes owned and purchased; use of vapes with others and at school; beliefs about specific potential health effects of vaping; details of noticing ads for e-cigarettes on social media; noticing news stories about vaping (and perceptions); general perceptions of harm for cannabis smoking and vaping; and New Zealand-specific questions on smoking/vaping while using alcohol. Most cannabis-related content was not asked in New Zealand.

DATA INTEGRITY CHECKS

As a data integrity check, partway through the survey, respondents were asked to select the current month from a list. The month selected by the respondent was compared to the month when the survey was submitted. Respondents with month discrepancies were excluded from the analytic sample, unless the selected month was within two days of the date the survey was submitted (e.g., selected August but submitted on September 1st or 2nd). An additional check was added in Wave 9, where year of birth was asked in the demographics section and compared to the age provided in the eligibility screening; respondents with discrepancies or who provided a year of birth outside of the study age range were excluded from the analytic sample. Responses were also reviewed for excessive speed (i.e., completion in <4 minutes or in <6 minutes with frequent non-response), multiple (>5) invalid open-ended responses, and suspicious patterns of response indicating likely duplicates or fraud, and responses were excluded from the analytic sample where warranted.

QUESTIONNAIRE DEVELOPMENT

Measures were adapted from existing national benchmark surveys (e.g., Canadian Tobacco Alcohol and Drugs Survey (CTADS¹), Canadian Student Tobacco Alcohol and Drugs Survey (CSTADS²), Population Assessment of Tobacco and Health (PATH) Study³), as well as previous versions of the ITC surveys.⁴ The same survey measures were used in all countries, with the exception of race/ethnicity, geographic region (i.e., province, state, or region), and education questions, which were based on census questions in each country (see *Appendix A*). Some New Zealand-specific items added in Wave 7 to assess national policy measures were from the adult ITC survey in NZ (EASE), and for comparability with national surveys.⁵

SAMPLE INFORMATION

PARTICIPATION

CANADA, ENGLAND, US

In the three countries, a total of 16,919 surveys were completed: 13,519 youth aged 16-19 (n=4,509 in Canada, n=4,505 in England, n=4,505 in the US), and 3,400 young adults aged 20-29 (n=1,100 in Canada, n=1,100 in England, n=1,200 in the US). Respondents who provided an incorrect response to the data quality check question [n=1,093: n=766 youth (195 in Canada, 205 in England, 366 in the US); n=327 young adults (77 in Canada, 85 in England, 165 in the US)], failed the

age-year of birth check [n=1359: n=1,041 youth (268 in Canada, 290 in England, 483 in the US); n=318 young adults (72 in Canada, 125 in England, 121 in the US)], or provided 5 or more invalid open-ended responses or a suspicious pattern of open-ended responses [n=180; n=155 youth (116 in Canada, 20 in England, 19 in the US) and 25 young adults (5 in Canada, 10 in England, 10 in the US)] were removed, as were participants who provided incomplete or invalid data on variables used for weighting^a [n=238: n=191 youth (62 in Canada, 70 in England, 59 in the US); n=47 young adults (14 in Canada, 20 in England, 13 in the US)]. A total of 14,049 respondents were retained for analysis (n=4,800 in Canada; n=4,780 in England; n=4,469 in the US): 11,366 youth (n=3,868 in Canada; n=3,920 in England; n=3,578 in the US) and 2,683 young adults (n=932 in Canada; n=860 in England; n=891 in the US).

NEW ZEALAND

In New Zealand, a total of 2,575 surveys were completed: 759 youth aged 16-19 and 1,816 young adults aged 20-29. Respondents who provided an incorrect response to the data quality check question (n=100; n=34 youth and n=66 young adults), failed the age-year of birth check question (n=147; n=57 youth and n=90 young adults), or provided 5 or more invalid open-ended responses or a suspicious pattern of open-ended responses (n=99; n=30 youth and n=69 young adults) were removed, as were participants who provided incomplete or invalid data on variables used for weighting^b (n=24: n=8 youth and n=16 young adults). A total of 2205 respondents in New Zealand were retained for analysis: 630 youth and 1,575 young adults.

AUSTRALIA

In Australia, a total of 2,205 surveys of youth aged 16-19 were completed. Respondents who provided an incorrect response to the data quality check question (n=102), failed the age-year of birth check (n=142) or provided 5 or more invalid open-ended responses or a suspicious pattern of open-ended responses (n=65) were removed, as were participants who provided incomplete or invalid data on variables used for weighting^c (n=23); respondents who reported living in geographic regions outside the scope of the weights (i.e., small territories) were also excluded (n=5). A total of 1868 youth respondents in Australia were retained for analysis.

^aAge, country, geographic region, and ever smoking variables were mandatory responses in Wave 9. Weighting also required sex at birth (n=83 not specified and unable to be imputed from gender: 64 youth, 19 young adults) and last smoked (n=16 'Don't know'/'Refused' responses: 15 youth, 1 young adults), while ever vaping (n=90 'Don't know'/'Refused' responses: 67 youth, 23 young adults) and last vaped (n=96 'Don't know'/'Refused' responses: 76 youth, 20 young adults) were key variables required for inclusion in the dataset; respondents were excluded for missing one or more of these variables.

^bFor New Zealand, weighting required sex at birth (n=23 not specified and unable to be imputed from gender: 8 youth, 15 young adults) and last smoked (n=1 'Don't know' response: 1 youth, 0 young adults), while ever vaping (n=28 'Don't know'/'Refused' responses: 13 youth, 15 young adults) and last vaped (n=19 'Don't know'/'Refused' responses: 8 youth, 11 young adults) were key variables required for inclusion in the dataset; respondents were excluded for missing one or more of these variables.

^cFor Australia, weighting required sex at birth (n=34 not specified and unable to be imputed from gender) and last smoked (n=1 'Don't know' response), while ever vaping (n=36 'Don't know'/'Refused' responses) and last vaped (n=7 'Don't know'/'Refused' responses) were key variables required for inclusion in the dataset; respondents were excluded for missing one or more of these variables.

RESPONSE AND PARTICIPATION RATES

CANADA, ENGLAND, US

A total of 250,130 invitations were sent to panelists (150,444 directly to youth, 43,871 to parents, 55,815 to young adults): n=124,184 in Canada (65,870 youth, 24,145 parents, 34,169 young adults), n=89,774 in England (64,833 youth, 6,762 parents, 18,179 young adults), and n=36,172 in the US (19,741 youth, 12,964 parents, 3,467 young adults). Of these, 14,049 (5.6% of those invited) completed the survey and were retained for analysis: n=4800 in Canada (3.2% of those invited); n=4780 in England (5.3% of those invited); n=4469 in the US (12.3% of those invited).

Of the 250,130 total invitations, 40,012 potential respondents (16.0% of those invited) accessed the survey link. A total of 16,919 surveys were completed (42.3% of those who accessed the survey link), and 3,304 were partially completed [dropouts (n=3,069) or terminated before completing the survey (n=235)]. A further 13,647 were screened ineligible and terminated (including 2,795 who were flagged as data quality concerns for failing authenticity checks), 1,201 may have been eligible but their country quota was full, and 2,809 did not provide enough information to determine eligibility (due to closing the survey before completing all eligibility questions, or parent non-consent). Regarding consent, 1,398 parents and 1,845 respondents refused participation (n=3,243 total refusals) and a further 287 respondents and 322 parents reached the study information but did not consent. Of the 16,919 completed surveys, n=14,049 (83.0%) were retained for analysis.

TABLE 1: Dispositions of potential respondents in Canada, England, and US who accessed the survey link (n=40,012)

Disposition	n	%
Eligible	22,355	55.9%
Complete	16,919	42.3%
Consented, survey incomplete	3,304 ^a	8.3%
Screened eligible, did not consent	2,132 ^b	5.3%
Ineligible	13,647	34.1%
Screened ineligible	10,852 ^c	27.1%
Inconsistent/quality issue	2,795 ^d	7.0%
Eligibility unknown	2,809	5.6%
Not fully screened, parent did not consent	1,720 ^e	4.3%
Not fully screened, eligibility unknown	1,089 ^f	2.7%
Over quota	1,201^g	3.0%
TOTAL	40,012	100%

^aIncludes n=235 respondents who were terminated (n=233 for refusing a key item, n=2 flagged by the survey panel for quality or other reasons)

^bIncludes refusals (n=1845 at respondent level) and those who did not respond to the consent question (n=287 at respondent level)

^cRespondent screened ineligible [due to ineligible age (n=237 were <16 years of age; n=3527 were >29 years of age; n=6212 were adults with no children of eligible age); ineligible country (n=650) or region (n=226)]

^dRespondent ineligible due to failing initial slider task to enter the survey (n=232), inconsistent country or language in screening (n=515), or failed third-party verification system for respondent authenticity (n=2048)

^eIncludes refusals (n=1398 at parent level) and those who did not respond to the consent question (n=322 at parent level)

^fRespondent closed the survey before all screening questions were completed and eligibility determined (n=274 of which had parental consent but youth was not fully screened)

^gRespondent accessed the survey after the quota for their country was filled, and was thus unable to complete the survey [n=486 Canada (81 youth, 405 young adults), n=348 England (114 youth, 234 young adults), n=367 US (145 youth, 222 young adults)]

NEW ZEALAND

In New Zealand, 4,659 potential respondents accessed the survey link. A total of 2,575 surveys were completed (55.3% of those who accessed the survey link), and 562 were partially completed [dropouts (n=550) or terminated before completing the survey (n=12)]. A further 1,095 were screened ineligible and terminated (including 477 who were flagged as data quality concerns for failing authenticity checks), and 222 did not provide enough information to determine eligibility (due to closing the survey before completing all eligibility questions, or parent non-consent). Regarding consent, 40 parents and 155 respondents refused participation (n=195 total refusals) and a further 50 respondents and 15 parents reached the study information but did not consent. Of the 2575 completed surveys, n=2205 (85.6%) were retained for analysis.

TABLE 2: Dispositions of potential respondents in New Zealand who accessed the survey link (n=4,659)

Disposition	n	%
Eligible	3,342	71.7%
Complete	2,575	55.3%
Consented, survey incomplete	562 ^a	12.1%
Screened eligible, did not consent	205 ^b	4.4%
Ineligible	1,095	23.5%
Screened ineligible	618 ^c	13.3%
Inconsistent/quality issue	477 ^d	10.2%
Eligibility unknown	222	4.8%
Not fully screened, parent did not consent	55 ^e	1.2%
Not fully screened, eligibility unknown	167 ^f	3.6%
TOTAL	4,659	100%

^aIncludes n=12 respondents who were terminated (for refusing a key item)

^bIncludes refusals (n=155 at respondent level) and those who did not respond to the consent question (n=50 at respondent level)

^cRespondent screened ineligible [due to ineligible age (n=12 were <16 years of age; n=108 were >29 years of age; n=468 were adults with no children of eligible age); ineligible country (n=20) or region (n=10)]

^dRespondent ineligible due to failing initial slider task to enter the survey (n=11), inconsistent country in screening (n=30), or failed third-party verification system for respondent authenticity (n=436)

^eIncludes refusals (n=40 at parent level) and those who did not respond to the consent question (n=15 at parent level)

^fRespondent closed the survey before all screening questions were completed and eligibility determined (n=27 of which had parental consent but youth was not fully screened)

AUSTRALIA

In Australia, 4,390 potential respondents accessed the survey link. A total of 2205 surveys were completed (50.2% of those who accessed the survey link), and 324 were partially completed [dropouts (n=306) or terminated before completing the survey (n=18)]. A further 1,437 were screened ineligible and terminated (including 255 who were flagged as data quality concerns for failing authenticity checks), and 219 did not provide enough information to determine eligibility (due to closing the survey before completing all eligibility questions, or parent non-consent). Regarding consent, 97 parents and 88 respondents refused participation (n=185 total refusals) and a further 19 respondents and 21 parents reached the study information but did not consent. Of the 2205 completed surveys, n=1868 (84.7%) were retained for analysis.

TABLE 3: Dispositions of potential respondents in Australia who accessed the survey link (n=4,390)

Disposition	n	%
Eligible	2,636	60.0%
Complete	2,205	50.2%
Consented, survey incomplete	324 ^a	7.4%
Screened eligible, did not consent	107 ^b	2.4%
Ineligible	1,437	32.7%
Screened ineligible	1,182 ^c	26.9%
Inconsistent/quality issue	255 ^d	5.8%
Eligibility unknown	219	5.0%
Not fully screened, parent did not consent	118 ^e	2.7%
Not fully screened, eligibility unknown	101 ^f	2.3%
Over quota	98	2.2%
TOTAL	4,390	100%

^aIncludes n=18 respondents who were terminated (for refusing a mandatory item)

^bIncludes refusals (n=88 at respondent level) and those who did not respond to the consent question (n=19 at respondent level)

^cRespondent screened ineligible [due to ineligible age (n=27 were <16 years of age; n=636 were >20 years of age; n=510 were adults >29 with no children of eligible age); ineligible country (n=8) or region (n=1)]

^dRespondent ineligible due to failing initial slider task to enter the survey (n=9), inconsistent country in screening (n=29), or failed third-party verification system for respondent authenticity (n=217)

^eIncludes refusals (n=97 at parent level) and those who did not respond to the consent question (n=21 at parent level)

^fRespondent closed the survey before all screening questions were completed and eligibility determined (n=23 of which had parental consent but youth was not fully screened)

^gRespondent accessed the survey after the quota for their country was filled, and was thus unable to complete the survey

PARTICIPATION RATE

For commercial panels that include non-probability based samples, the American Association for Public Opinion Research (AAPOR) recommends reporting the ‘participation rate’, also referred to as a ‘completion rate’. The participation rate is defined as “the number of respondents who have provided a usable response divided by the total number of initial personal invitations requesting participation”.⁶ Participation rates are largely a product of sample management and the amount of sample that is ‘released’ prior to reaching target quotas. In the three countries (Canada, England, US), of the 250,130 invitations sent to panelists, 14,049 respondents completed the survey and were retained in the sample, for a total participation rate of 5.6%.

CO-OPERATION RATE

The cooperation rate represents “the proportion of all cases interviewed of all eligible units ever contacted”.⁶ Across the three countries (Canada, England, US), the respondent-level cooperation rate was 75.6%, which was calculated based on AAPOR Cooperation Rate #1, as the percentage of respondents who completed the survey (n=16,919) of those eligible who accessed the survey link (n=22,355). In New Zealand, the respondent-level cooperation rate (AAPOR Cooperation Rate #1) was 77.0%, from 2,575 respondents who completed the survey out of 3,342 eligible who accessed the survey link. In Australia, the respondent-level cooperation rate (AAPOR Cooperation Rate #1) was 83.6%, from 2,205 respondents who completed the survey out of 2,636 eligible who accessed the survey link.

SAMPLE CHARACTERISTICS

Table 2 presents the characteristics of the unweighted youth sample, in each country and overall.

⁶ The American Association for Public Opinion Research. 2016. Standard Definitions: Final Dispositions of Case Codes and Outcome Rates for Surveys. 9th edition. AAPOR. Available at: https://www.aapor.org/AAPOR_Main/media/publications/Standard-Definitions20169theditionfinal.pdf

TABLE 2: Sample characteristics, youth aged 16-19, overall and by country, unweighted (n=13,684)

¹Determined by response to “sex at birth” for most respondents; where sex at birth was missing, inferred from gender if “man” or “woman” selected

²Includes responses “gender queer/gender non-conforming” and “different identity”

³Determined by response to detailed country-specific questions that asked about race/ethnicity with multiple categories, then categorized into those who specified only white/European, or any other response

SURVEY WEIGHTS

YOUTH AGED 16-19

In Wave 9, post-stratification sample weights were constructed based on population estimates for sociodemographic variables; first-wave estimates for student status and academic grades in Canada, England, the US and Australia, student status in New Zealand; and, calibration to the trend over time for smoking in the last 30 days indicated by the National Youth Tobacco Survey (NYTS) in the US, the Canadian Student Alcohol and Drugs Survey (CSADS; formerly the Canadian Student Tobacco, Alcohol and Drugs Survey (CSTADS)) in Canada, the New Zealand Health Survey (NZHS) in New Zealand, and the National Drug Strategy Household Survey (NDSHS) in Australia. In the first wave (Wave 8) for Australia, past 30-day smoking was calibrated to the current smoking rate among 16- to 19-year-old respondents from the 2022/23 NDSHS. The NDSHS current smoking definition “Includes people who reported smoking daily, weekly or less than weekly”, and includes other tobacco products as well as cigarettes.

Respondents were classified into sex-by-age-by-region groups in Canada, England and Australia, sex-by-age-by-region and race/ethnicity-by-region groups in the US (this is a change from Waves 1-7 in the US where respondents had been classified in sex-by-age-by-region-by-race/ethnicity groups), and sex-by-race/ethnicity groups and groups for each year of age in New Zealand, where: sex was male or female; age was 16-17 or 18-19 for Canada, England, and the US, and age was 16, 17, 18, or 19 for New Zealand and Australia; race/ethnicity was White/Caucasian only or Other in the US, and European, Māori, Pacific, or Asian/Middle Eastern/Latin American/African/Other (Asian/MELAA/Other) in New Zealand (MELAA/Other was originally a distinct category but was combined due to small cell sizes); and, geographic region was specific to each country [US: New England, Middle Atlantic, East North Central, West North Central, South Atlantic, East South Central, West South Central, Mountain, Pacific; Canada: Atlantic, Quebec, Ontario, Prairies, British Columbia; England: North East, North West, Yorkshire and the Humber, East Midlands, West Midlands, East of England, London,

South East, South West; Australia: New South Wales, Queensland, South Australia, Victoria, Western Australia, Tasmania/Northern Territory/Australian Capital Territory. [Note: In Australia, ages 16 and 17 were merged within the grouped regions (Tasmania/NT/ACT) among both sexes, and in South Australia and Western Australia among females, due to small cell sizes.] Calibration/target figures for the demographic variables were obtained from the US Census Bureau, Population Division, State Characteristics Population Estimates⁷ in the US (for mid-2024); Statistics Canada's Annual Population Estimates on July 1st by age and sex⁸ in Canada (for mid-2025); the Office for National Statistics' Estimates of the population for England and Wales⁹ in England (for mid-2024); Stats NZ's Aotearoa Data Explorer^{10,11} in New Zealand (2023 census); and, from the Australian Bureau of Statistics' National, state and territory population¹² in Australia (for mid-2024). Cross-classifications were of region (in CA/EN/US/AU), sex, age group (16-17 and 18-19 in CA/EN/US) or single year of age (NZ/AU), and race/ethnicity (in the US and NZ).

Respondents were also classified by student status (student vs. not), school grades [(<70%, don't know, and refused; 70-79%; 80-89%; 90-100%)(Canada, England, and the US) or (Mostly Es, Mostly Ds, don't know, and refused; Mostly Cs; Mostly Bs; Mostly As)(Australia)], and past 30-day smoking status (Canada, the US, New Zealand, and Australia only). In the US, Canada, New Zealand, and Australia, nationally representative estimates from the NYTS, CSADS/CSTADS, NZHS, and NDSHS (the national monitoring surveys in each country), were used to calibrate to the trend over time for past 30-day smoking; the data from England were not calibrated to an external trend as there was no benchmark survey available for England in the relevant age range (16- to 19-year-olds). Briefly, the percent change in the past 30-day smoking rate observed in the national monitoring surveys was applied to our Wave 1 estimates (estimates from 2017 for Canada and the US, from 2023 for New Zealand and from 2024 for Australia), providing target rates for weighting subsequent waves; Wave 1 was not adjusted in any way, except in Australia. For Canada, the most recent CSADS/CSTADS data are from 2021/22 and 2023/24.¹³ The yearly rate of decline among grades 10-12 from the most recent CSADS/CSTADS data was applied to the youth data to estimate the target smoking rate for weighting. In the US, the most recent NYTS data, which are collected annually, are from 2024.¹⁴ The yearly rate of decline based on the last 2 years of NYTS was used (*which is the same as an average of the 2 yearly declines*). For Wave 9, our estimate of smoking was based on applying the same yearly rate of decline that was found between NYTS 2022 to 2024 among grades 9-12. In New Zealand, the most recent wave of the NZHS was 2023/24. The yearly rate of decline among ages 15-24 from the 2021/22 and 2023/24 waves of NZHS¹⁵ was applied to the youth data to estimate the target smoking rate for weighting. In the most recent release of the NZHS, smoking and other estimates were updated slightly to be based on the 2023 census. The target smoking rate for Wave 9

was calculated based on these updated estimates, whereas the target smoking rate for Wave 8 was based on the previous version of the estimates and has been left as is. In Australia, the yearly rate of decline among ages 15-24 from the 2019 and 2022/23 waves of the NDSHS¹⁶ was applied to the youth data to estimate the target smoking rate for weighting. The 2022/23 wave is the most recent wave of the NDSHS. The sample distribution for student status and school grades was scaled to Wave 1 for Canada, England, and the US (because later waves of the sample included more non-students and more respondents with lower academic grades), thus maintaining greater consistency in the sample across waves. Similarly, the sample distribution for student status was scaled to Wave 7 (2023) for New Zealand, as that was the first wave of New Zealand data and the sample distribution for student status and school grades was scaled to Wave 8 (2024) for Australia, as that was the first wave of Australia data. Note: a version of the weights was also created that did not calibrate to the past 30-day smoking trend in the US, Canada, New Zealand, and Australia; this is used only for comparative analyses.

Separately for each country, a raking algorithm was applied to compute weights calibrated to the groupings (sex-by-age-by-region in Canada, England, and Australia, sex-by-age-by-region and race/ethnicity-by-region in the US, and sex-by-race/ethnicity in New Zealand); each year of age in New Zealand; student status; school grades (in CA/EN/US/AU); and past 30-day smoking status in Canada, the US, New Zealand, and Australia). The SAS macro “RAKE_AND_TRIM_G4_V5”¹⁷ was used, with trimming to 5 (rescaled) in the US and New Zealand. Please note that trimming was also set to the usual value of 5 for Canada, England, and Australia, although none of these countries needed trimming in Wave 9. Finally, the weights were rescaled to the sample size within each country.

YOUNG ADULTS AGED 20-29

In Wave 9, post-stratification sample weights were constructed based on population estimates for sociodemographic variables; and calibration to the rate of smoking in the last 30 days indicated by the National Health Interview Survey (NHIS) in the US, the Canadian Community Health Survey (CCHS) in Canada, the Annual Population Survey (APS) in England, and the New Zealand Health Survey (NZHS) in New Zealand. Respondents were classified into sex-by-age-by-region groups in Canada, England and the US, race\ethnicity-by-region groups in the US, and sex-by-age-by-race\ethnicity groups in New Zealand, where: sex was male or female; age was 20-24 or 25-29; race/ethnicity was White/Caucasian only or Other in the US, and European, Māori, Pacific, or Asian/Middle Eastern/Latin American/African/Other (Asian/MELAA/Other) in New Zealand; and, geographic region was specific to each country (as described above for youth, with the exception that four regions instead of nine were used for the US young adult weights: Northeast, Midwest, South, and West, and four regions rather than nine were used for the England young adult weights: North and Yorkshire (North East, North West, and Yorkshire), Midlands (East and West Midlands), South (East, South East, and South West), and London). Calibration/target figures for the demographic variables were obtained from the US Census Bureau, Population Division, State Characteristics Population Estimates⁷ in the US (for mid-2024); Statistics Canada’s Annual Population Estimates on July 1st by age and sex⁸ in Canada (for mid-2025); from the Office for National Statistics Estimates of the population for England and Wales⁹ (for mid-2024); and from Stats NZ in New Zealand, Aotearoa Data Explorer¹⁰ (2023 census). Cross-classifications were of region (in CA/EN/US), sex, age group (20-24 and 25-29), and race/ethnicity (in the US and New Zealand).

Nationally representative estimates from the NHIS, CCHS, APS, and NZHS (the national monitoring surveys in the US, Canada, England, and New Zealand, respectively), were used to calibrate to the trend over time for past 30-day smoking. Briefly, in Canada and England, in Wave 4 (2020), which was the first wave of young adult data collection for those countries, the past 30-day smoking rate was weighted to the smoking rate from the national monitoring surveys (CCHS in

¹⁶ Australian Government. Australian Institute of Health and Welfare. National Drug Strategy Household Survey 2019 and 2022-2023 – 2. Tobacco smoking: Table 2.4: Tobacco smoking status, by age and gender, 2001 to 2022-2023 (row percent). Released 29, 2024. Accessed October 7, 2024. Available at <https://www.aihw.gov.au/reports/illegal-use-of-drugs/national-drug-strategy-household-survey/data?&page=1>

¹⁷ The macro was obtained from https://www.abtassociates.com/sites/default/files/files/Insights/Tools/rake_and_trim_G4_V5.sas, with further documentation available at https://www.abtassociates.com/sites/default/files/files/Insights/Tools/SD_62_2017.pdf.

Canada and APS in England). Specifically, the smoking rates used were the percentage of 18- to 34-year-olds who smoke daily or occasionally according to the 2020 CCHS in Canada, and the percentage of 18- to 34-year-olds who smoke nowadays according to the 2020 APS in England (calculated from the 18- to 24-year-old rate and the 25- to 34-year-old rate). The Office of National Statistics had updated their APS smoking estimates for 2020-2023 in their most recent release to address mode effects over the pandemic. The calculations for all ITC waves prior to Wave 9 use the previous 2020-2023 APS estimates that were released prior to the update. In the US, in Wave 4 (2020), the current smoking rate (smoked in the past 30 days and smoked 100 or more cigarettes in their lifetime) was weighted to the current smoking rate (smoked every day or some days and smoked 100 or more cigarettes in their lifetime) from the NHIS. In the first wave of young adult data collection in New Zealand, Wave 7 (2023), the young adult weights did not adjust by smoking rate. As mentioned for the New Zealand youth, in the most recent release of the NZHS, smoking and other estimates were updated to be based on the 2023 census. The target smoking rate for Wave 9 was calculated based on these updated estimates, whereas the target smoking rate for Wave 8 was based on the previous version of the estimates and has been left as is. In all subsequent waves in all countries, the percent change in the smoking rate observed in the national monitoring surveys was applied to our past 30-day smoking rate estimates from the previous wave; even in the US, where the weights for the first wave [Wave 4 (2020)] were adjusted to the current smoking rate, the weights in all subsequent waves were adjusted to the past 30-day smoking rate. The 2-year rates of change from 2022 NHIS to 2024 NHIS,¹⁸ 2022 CCHS to 2024 CCHS,¹⁹ 2022 APS to 2024 APS,²⁰ and 2022/23 NZHS to 2024/25 NZHS¹⁵ were applied to the Wave 9 young adult data, after calculating the respective yearly rates of change based on those 2-year rates of change, to estimate the target smoking rate for weighting for the US, Canada, England, and New Zealand, respectively.

As was done with the youth, a version of the weights was also created that did not calibrate to the past 30-day smoking status for Canada, England, the US, and New Zealand; this is used only for comparative analyses.

Separately for each country, a raking algorithm was applied to compute weights calibrated to the groupings sex-by-age-by-region in Canada*, England, and the US, race/ethnicity-by-region in the US, and sex-by-age-by-race/ethnicity in New Zealand*; and past 30-day smoking status. The SAS macro “RAKE_AND_TRIM_G4_V5”¹⁷ was used, with trimming to 5 (rescaled) if necessary. Finally, the weights were rescaled to the sample size within each country.

*Note: In Canada, for the sex-by-age-by-region variable, age groups 20-24 and 25-29 were collapsed among males in the Atlantic provinces. In New Zealand, for the sex-by-age-by-race/ethnicity variable, MELAA/Other and Asian were collapsed in the race/ethnicity variable.

Nous intéressons aux opinions de tous les jeunes, pas seulement ceux qui utilisent ces produits. La participation de votre enfant aidera les chercheurs à se pencher sur l'incidence éventuelle des différentes politiques en matière de santé.</p> <p>L'étude est dirigée par le professeur David Hammond de l'Université de Waterloo au Canada.</p> <p>Environ 20 minutes seront requises pour répondre à toutes les questions.</p> <p>En guise de remerciement de la participation de votre enfant, la firme de sondages (Nielsen ou fournisseur du panel) fournira la rémunération qui est normalement due au membre du panel.</p>

This survey will take about 20 minutes to complete.

As a thank you for your child's participation, the survey firm [CA/EN/US:(either Nielsen or your panel provider)] will provide you with your usual compensation.

Some questions are required to complete the survey; for all other questions, your child's participation is completely voluntary. Your child can refuse to answer any question he/she does not wish to answer, and can withdraw participation at any time.

All of the information your child provides will be grouped with responses from other participants, which means that there will be no way to identify participants individually from the reports we create. Your child will not be asked to provide their name, address, or telephone number. For more information about privacy in connection with this study, please read and have your child read the survey. Privacy Notice, also linked at the bottom of this page. The data will be stored for a minimum of 7 years on a secure University of Waterloo server. Researchers will not retain internet protocol (IP) addresses or other information which could link your child's participation to a computer or electronic device. Please note that while we implement security safeguards designed to protect all survey data, when information is transmitted over the internet, there is still a risk your child's responses may be intercepted by a third party (e.g., government agencies, hackers). The questions you have answered up to this point are for the survey firm, and will not be shared with the researchers.

[NZ: Ethnicity identifiers and Māori/Pacific participant question specific data will be removed from the main dataset and stored separately at the University of Otago. Any proposals for use by researchers from outside New Zealand of any of the data which includes Māori specific analysis must be reviewed and approved by a committee including Māori researchers.]

[CA/EN/US/AU: This study has been reviewed and received ethics clearance through a University of Waterloo Research Ethics Board (ORE#31017). If you have questions for the Board, contact the Office of Research Ethics, toll-free at 1-833-643-2379 (Canada and USA), 1-519-888-4440, or reb@uwaterloo.ca].

[AU: This study also adheres to the Guidelines of the ethical review process of The University of Queensland and the National Statement on Ethical Conduct in Human Research (2023/HE002406). If you wish to discuss your participation in this study with

La participation de votre enfant est complètement facultative. Certaines questions sont obligatoires. Pour toutes les autres, libre à votre enfant de refuser de répondre à toute question à laquelle il/elle ne souhaite pas répondre; et il/elle peut se retirer de l'enquête à tout moment.

Toutes les informations fournies par votre enfant seront regroupées avec les réponses des autres participants, ce qui signifie qu'il n'y aura aucun moyen d'identifier les participants individuellement à partir des rapports que nous créons. Votre enfant n'aura pas à fournir son nom, son adresse, ni son numéro de téléphone. Pour de plus amples renseignements sur la confidentialité de la présente étude, veuillez lire l'Avis de confidentialité joint dans le bas de la page et faites le lire à votre enfant. Les données seront conservées pendant au moins 7 ans, et ce, sur un serveur sécurisé à l'Université de Waterloo. Les chercheuses et les chercheurs ne garderont pas les adresses de protocole Internet (IP) ni d'autres renseignements qui pourraient permettre d'établir un lien entre la participation de votre enfant et votre ordinateur ou tout autre dispositif électronique. Même si nous utilisons des mesures de sécurité pour protéger tous les renseignements de votre enfant, lorsque des renseignements sont transmis sur Internet, il y a toujours un risque qu'une tierce partie intercepte les réponses de votre enfant (p. ex., des organismes gouvernementaux, des pirates informatiques). Les réponses aux questions jusqu'ici sont pour la firme de sondages et ne seront pas partagées avec les chercheurs.

L'étude a été examinée et a été approuvée par le comité de l'éthique en recherche de l'Université de Waterloo (ORE#31017). Si vous avez des questions à poser au comité de la recherche en éthique de l'Université de Waterloo, communiquez avec le bureau de l'éthique en recherche au 1-833-643-2379, ou écrivez à l'adresse reb@uwaterloo.ca. Si vous avez toute autre question au sujet de cette étude, veuillez communiquer avec le professeur David Hammond de l'Université de Waterloo en composant le 1 519 888-4567, poste 46462, ou en écrivant à dhammond@uwaterloo.ca.
